Machine Tool Structures F. Koenigsberger, J. Tlustý, 2016-01-21 Machine Tool Structures Volume 1 deals with fundamental theories and calculation methods for machine tool structures Experimental investigations into stiffness are discussed along with the application of the results to the design of machine tool structures Topics covered range from static and dynamic stiffness to chatter in metal cutting stability in machine tools and deformations of machine tool structures This volume is divided into three sections and opens with a discussion on stiffness specifications and the effect of stiffness on the behavior of the machine under forced vibration conditions The following chapters explore the stability of the machine structure against chatter methods of stability analysis tests and principles of dampers chatter during grinding operations and stresses and deformations of closed box structures subjected to bending and shear Calculation methods for determining stiffness constants of a structure s individual parts as well as methods for determining the resulting stiffnesses modal shapes and their parameters are also described The final chapter presents systematic procedures for the analysis of machine tool structures This book is intended for university students research workers and designers **Time-Domain Signature**

Barcodes for Chipless-RFID and Sensing Applications Ferran Martín, Cristian Herrojo, Javier Mata-Contreras, Ferran Paredes, 2020-02-01 This book presents an unconventional approach for implementing chipless radiofrequency identification RFID systems and related sensors Contrary to most state of the art chipless RFID systems the proposed approach is based on time domain and the tags are read through near field The book discusses different aspects of these chipless RFID systems including tag and reader design strategies to enhance the data density and capacity tag programming and erasing tag implementation in plastic and paper substrates and synchronous tag reading among others A tolerance analysis and validation of the different systems as well as prospective applications are also included The book also offers a comprehensive overview of the state of the art in chipless RFID technology including a comparative analysis which is extended also to chip based RFID systems Readers are expected to be familiar with RF microwave engineering technology Besides master s and postgraduate students the book is intended for researchers in the field of radiofrequency identification RFID technology and may be of interest for engineers working in the areas of wireless communications automatic identification security authentication microwave and wireless sensors as well as those dealing with internet of things IoT and smart systems

under the main theme Systems Medicine for the Delivery of Better Healthcare Services Medical and Biological Engineering and Computing cover complementary disciplines that hold great promise for the advancement of research and development in complex medical and biological systems Research and development in these areas are impacting the science and technology by advancing fundamental concepts in translational medicine by helping us understand human physiology and function at multiple levels by improving tools and techniques for the detection prevention and treatment of disease Medicon 2016 provides a common platform for the cross fertilization of ideas and to help shape knowledge and scientific achievements by bridging complementary disciplines into an interactive and attractive forum under the special theme of the conference that is Systems Medicine for the Delivery of Better Healthcare Services The programme consists of some 290 invited and submitted papers on new developments around the Conference theme presented in 3 plenary sessions 29 parallel scientific sessions and 12 special sessions SAE Transactions Society of Automotive Engineers, 1927 Vols for include index which has title SAE transactions and literature developed

Crystallization as Studied by Broadband Dielectric Spectroscopy Tiberio A. Ezquerra, Aurora Nogales, 2020-10-28 This book presents new approaches that offer a better characterization of the interrelationship between crystalline and amorphous phases In recent years the use of dielectric spectroscopy has significantly improved our understanding of crystallization The combination of modern scattering methods using either synchrotron light or neutrons and infrared spectroscopy with dielectrics is now helping to reveal modifications of both crystalline and amorphous phases In turn this yields insights into the underlying physics of the crystallization process in various materials e g polymers liquid crystals and diverse liquids The book offers an excellent introduction to a valuable application of dielectric spectroscopy and a helpful guide for every scientist who wants to study crystallization processes by means of dielectric spectroscopy Industrial Coal Gasification Technologies Covering Baseline and High-Ash Coal Martin Gräbner, 2014-08-18 The ongoing discussion about reaching the peak oil point maximal delivery rate with conventional methods emphasizes a fundamental change of the frame conditions of oil based basic products The alternative with the largest potential is the use of coal Coal gasification is the production of coal gas a mixture of mainly hydrogen and carbon monoxide from coal adding agents like steam water and oxygen which can be used in a number of industrial processes e g hydroformulation and Fischer Tropsch process Many different kinds of coal do naturally occur and due to shrinking natural resources there has been a substantial gain of interest in poor ash rich coal Beside the quality of coal there is a number of other parameters influencing the efficiency of coal gasification such as temperature pressure and reactor type Although several books dealing with the subject of gasification have recently been published few are strictly focussed on coal as feedstock This monograph provides the reader with the necessary chemical background on coal gasification Several types of coal baseline coal and ash rich coal are compared systematically pointing out the technological efforts achieved so far to overcome this challenge Using a new innovative order scheme to evaluate the gasification process at a glance the ternary
