Fig. 10 To service the tank, disconnect the fuel line from the quick-connect fitting. ...

Fig. 11 ... then remove the screws holding the pickup and float assembly to the tank.

Fig. 12 When removing the pickup and float, be careful not to damage the float arm.

Fig. 13 The assembly must be tilted to remove the float arm from the tank.

9. Secure the pickup and float unit in place with the attaching screws.
10. If removed, connect the fuel tank, then pressurize the fuel system and check for leaks.

Boat Mounted Fuel Tanks

- See Figure 8

The other type of remote fuel tank usually used on these models is a boat mounted, built-in tank. Depending on the boat manufacturer, built-in tanks may vary greatly in actual shape/design and access. All should be of a one-way vented to prevent a vacuum lock, but capped to prevent evaporation design.

Most boat manufacturers are kind enough to incorporate some means of access to the tank should fuel lines, fuel pickup or floats require servicing. But, the means of access will vary greatly from boat-to-boat. Some might contain simple access panels, while others might require the removal of one or more minor or even major components for access. If you encounter difficulty, seek the advice of a local dealer for that boat builder. The dealer or higher techs should be able to set you in the right direction.

CAUTION

Observe all fuel system cautions, especially when working in recessed portions of a hull. Fuel vapors tend to gather in enclosed areas causing an even more dangerous possibility of explosion.

Anti-Siphon Valve

On boats with built-in fuel tanks, the fuel system is provided with an anti-siphon valve to prevent fuel from being siphoned from the tank in the event the fuel line is broken or disconnected. The valve is mounted on top of the tank. It should be removed periodically and checked to verify adequate fuel flow under normal conditions and no fuel flow when the valve is closed.

A non-functioning anti-siphon valve is often the cause of fuel delivery problems.

Fuel Lines and Fittings

GENERAL INFORMATION

- See Figure 6

In order for an engine to run properly it must receive an uninterrupted and unrestricted flow of fuel. This cannot occur if improper fuel lines are used or if any of the lines/fittings are damaged. Too small a fuel line could cause hesitation or missing at higher engine rpm. Worn or damaged lines or fittings could cause similar problems (also including stalling, poor/rough idle) as air might be drawn into the system instead of fuel. Similarly, a clogged fuel line, fuel filter or dirty fuel pickup or vacuum lock (from a clogged tank vent as mentioned under Fuel Tank) could cause these symptoms by starving the motor for fuel.

If fuel delivery problems are suspected, check the tank first to make sure it is properly vented, then turn your attention to the fuel lines. First check the lines and valves for obvious signs of leakage and then check for collapsed hoses that could cause restrictions.

- If there is a restriction between the primer bulb and the fuel tank, vacuum from the fuel pump may cause the primer bulb to collapse. Watch for this sign when troubleshooting fuel delivery problems.

CAUTION

Only use the proper fuel lines containing suitable Coast Guard ratings on a boat. Failure to do so may cause an extremely dangerous condition should fuel lines fail during adverse operating conditions.

If re-rigging a boat or just checking for proper rigging, keep the following fuelline and fitting dimensions in mind. Make sure the inside diameter of the fuel tank pickup tube and fuel hose is at least 5/16 in. (8mm), while the fittings are at least 1/4 in. (6.4mm) or larger for models up to 130 hp. The inside diameter of the hose and tank pickup tube must be at least 3/8 in. (9.5mm) or larger, with at least 5/32 in. (7.1mm) fittings for 135 hp or larger models. Also, please note that although a 5/16 in. (8mm) line/fitting is acceptable for smaller motors, a 3/8 in. (9.5mm) or larger line/fitting is preferred.
