

Chapter 17: Evolution of Populations

State Standards

Central Concept: Evolution is the result of genetic changes that occur in constantly changing environments. Over many generations, changes in the genetic make-up of populations may affect biodiversity through speciation and extinction.

Recognize that species are further classified into a hierarchical taxonomic system (kingdom, phylum, class, order, family, genus, species) based on morphological, behavioral, and molecular similarities. Describe the role that geographic isolation can play in speciation.
- 5.3 Explain how evolution through natural selection can result in changes in biodiversity through the increase or decrease of genetic diversity within a population.
- 5.3.1 Make observations, raise questions, and formulate hypotheses.
- Observe the world from a scientific perspective.
 - Pose questions and form hypotheses based upon personal observations, scientific articles, experiments, and knowledge.
