George Pitt-Rivers and the Nazis Bradley W. Hart, 2015-10-29 George Pitt Rivers began his career as one of Britain's most promising young anthropologists conducting research in the South Pacific and publishing articles in the country's leading academic journals With a museum in Oxford bearing his family name Pitt Rivers appeared to be on track for a sterling academic career that might even have matched that of his grandfather one of the most prominent archaeologists of his day By the early 1930s however Pitt Rivers had turned from his academic work to politics Writing a series of books attacking international communism and praising the ideas of Benito Mussolini and Adolf Hitler Pitt Rivers fell into the circles of the anti-Semitic far right In 1937 he attended the Nuremberg Rally and personally met Adolf Hitler and other leading Nazis With the outbreak of war in 1940 Pitt Rivers was arrested and interned by the British government on the suspicion that he might harm the war effort by publicly sharing his views effectively ending his academic career This book traces the remarkable career of a man who might have been remembered as one of Britain's leading 20th century anthropologists but instead became involved in a far right milieu that would result in his professional ruin and the relegation of most of his research to margins of scientific history At the same time his wider legacy would persist far beyond the academic sphere and can be found to the present day

A History of Scientific Journals Aileen Fyfe, Noah Moxham, Julie McDougall-Waters, Camilla Mørk Røstvik, 2022-10-03 Modern scientific research has changed so much since Isaac Newton's day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton's day to ours Scientific journals are now central to academic research and careers Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal articles they have published The journal that reported Newton's optical experiments still exists First published in 1665 and now fully digital the Philosophical Transactions has carried papers by Charles Darwin Dorothy Hodgkin and Stephen Hawking It is now one of eleven journals published by the Royal Society of London Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing The editorial management business practices and financial difficulties of the Philosophical Transactions and its sibling

Proceedings reveal the meaning and purpose of journals in a changing scientific community At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history

Science and the Navy Harvey M. Sapolsky,2014-07-14 Addressing all those interested in the history of American science and concerned with its future a leading scholar of public policy explains how and why the Office of Naval Research became the first federal agency to support a wide range of scientific work in universities Harvey Sapolsky shows that the ONR functioned as a surrogate national science foundation between 1946 and 1950 and argues that its activities emerged not from any particularly enlightened position but largely from a bureaucratic accident Once involved with basic research however the ONR challenged a Navy skeptical of the value of independent scientific advice and established a national security rationale that gave American science its Golden Age Eventually the ONR s autonomy was worn away in bureaucratic struggles but Sapolsky demonstrates that its experience holds lessons for those who are committed to the effective management of science and interested in the ability of scientists to choose the directions for their research As military support for basic research fades scientists are discovering that they are unprotected from the vagaries

Science and Technology in the Global Cold War Naomi Oreskes,John Krige,2014-10-31 Investigations of how the global Cold War shaped national scientific and technological practices in fields from biomedicine to rocket science The Cold War period saw a dramatic expansion of state funded science and technology research Government and military patronage shaped Cold War technoscientific practices imposing methods that were project oriented team based and subject to national security restrictions These changes affected not just the arms race and the space race but also research in agriculture biomedicine computer science ecology meteorology and other fields This volume examines science and technology in the context of the Cold War considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater opportunities for it The contributors find that whatever the particular science and whatever the political system in which that science was operating the knowledge that was produced bore some relation to the goals of the nation state These goals varied from nation to nation weapons research was emphasized in the United States and the Soviet Union for example but in France and China scientific independence and self reliance dominated The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics anxieties and aspirations of the Cold War Contributors
