Response Cards in Classrooms Response Cards (ARC) have boomed as a teaching resource with classrooms throughout Australia and internationally. Their aim is to limit the amount of avoidable disruption that occurs in the learning environment by helping to keep students engaged and on-task. Supporters of ARC implementation in classrooms report heightened student participation, in turn, leading to improved academic achievement of students.

Heard (1994) proclaims that 'response cards are cards, signs or items that are held up simultaneously by all students to display their response to a question or problem presented by the teacher. This new form of "low-tech" learning technology can be used across many key learning areas as they provide equal opportunity for all students to actively participate and contribute during lessons.

Furthermore, ARCS generate an engaging and lively classroom environment contradictory to the lack of participation that is characteristic of more teacher-centered classrooms. Furthermore, the variability of activities that ARCS allow for help to generate a more positive and productive teacher-student relationship. Rationales and Evidence Base A substantial amount of research has been conducted on ARC use to determine the outcomes they improve, and how significant these improvements may be.

Current research purports similar rationales and findings, including that ARCS stimulate engagement from an entire class during a lesson, allow students to clearly communicate their understanding of specific course content, allow the educator to detect when a student does not fully comprehend a particular concept within course material, and help decrease disruption and the prevalence of off-task behavior (Blockwell & McLaughlin, 2005; Heard, 1994; Maroon, 2007; Randolph, 2007). In *The Classroom Experiment*, William argues that ARCS are an incredibly important educational development.

William expected that Arcs, such as "mint-whiteboards" would help teachers to quickly identify when pupils did and did not have a solid understanding of specific course content. Further, William hypothesized that these ARCS would promote the engagement of every student in the classroom, as they would have no chance to "hide" an incorrect response. It was clear from the observations and reflections of the students and the teaching staff, that the implementation of these "mint-whiteboards" was achieving Williams goals.

Teachers at the school reported that the "mint-whiteboards" were lawful in quickly identifying the students' misconceptions and that they thoroughly increased classroom participation. It was further found that students also had a positive learning experience through the use of this type of ARC, with some children saying that on the whole, the use of this new learning technology improved their time within the classroom,
