Foul Water Guide Service:

Agriculture and the Environment F.B. de Walle,J. Sevenster,2012-12-06 In this study an overview is presented of agricultural policies on manure and minerals relating to the Nitrate Directive to remedy excessive surface and groundwater contamination from intensive agricultural practices Six countries belonging to the European Union were studied the Netherlands Belgium Denmark France Germany and the United Kingdom The policies and their legal incorporation were related to agricultural and environmental conditions in each country In addition an inventory was made of agricultural mineral poli cies in the United States and Canada Conditions for livestock farming in North America differ considerably from those in Europe but their solutions shed a different light on European policies Research has shown that there are still very considerable mineral surpluses in many countries and regions In both the Netherlands and in the Flemish part of Belgium existing problems due to very high levels of manure production are structural rather than local and cannot easily be solved by transport of manure to other regions To a lesser extent Germany Denmark and relatively small parts of France Brittany and the United Kingdom still exceed the norms for an equilibrium fertilization In Denmark existing problems can probably be solved within the existing legislative framework The Netherlands Flanders several German Lander Nordrhein Westfalen and Schleswig Holstein and Brittany

Library Systems Branch,1974 Guideline for Building Services Design Inspired by the Cradle to Cradle Concept Johannes Stiglmaier,Karsten Jurkait,2020 The Cradle to Cradle C2C concept is a biomimetic approach that models human industry on nature s processes viewing materials as nutrients circulating in healthy and safe metabolisms It seeks to create systems that are not only efficient but also essentially waste free A growing number of building owners and developers are looking to implement it in their buildings be it to increase the productivity of their workforce or to provide a differentiator The C2C concept is reasonably covered in building construction however it is a rather uncharted area in building services making it difficult for MEP engineers to develop C2C inspired designs Arup set out to bridge this gap establishing how C2C inspired design would look like in the different MEP disciplines and researching which systems products and materials are available in the market to meet the corresponding criteria The result is a comprehensive guideline that enables MEP engineers to develop a C2C inspired design It covers design criteria system selection system sizing design for deconstruction as well as material and product selection for the main MEP disciplines and sets out a number of criteria by which the aptness of a design for C2C can be measured
