Foundations of Jini 2 Programming Jan Newmarch, 2007-02-01 Here is a comprehensive reference for Java programmers interested in learning and applying Jini toward their respective network applications any Java enabled device interoperable with any other Java enabled device Jini is Sun's Java based technology with potential to make transparent universal plug and play a reality This book is an expanded updated version of the most popular online tutorial for Jini Author Jan Newmarch includes comprehensive Jini advancements and other important topics like how Enterprise JavaBeans blend in with the Jini framework and how CORBA fits in as well The book is based on Jini 2.0 [Improving Complex Systems Today](#)

Daniel D. Frey, Shuichi Fukuda, Georg Rock, 2011-07-09 As the main theme of [Improving Complex Systems Today](#) implies this book is intended to provide readers with a new perspective on concurrent engineering from the standpoint of systems engineering It can serve as a versatile tool to help readers to navigate the ever changing state of this particular field The primary focus of concurrent engineering was at first on bringing downstream information as far upstream as possible by introducing parallel processing in order to reduce time to market and to prevent errors at a later stage which would sometimes cause irrevocable damage Up to now numerous new concepts methodologies and tools have been developed but over concurrent engineering's 20 year history the situation has changed extensively Now industry has to work in the global marketplace and to cope with diversifying requirements and increasing complexities Such globalization and diversification necessitate collaboration across different fields and across national boundaries Thus the new concurrent engineering calls for a systems approach to gain global market competitiveness [Improving Complex Systems Today](#) provides a new insight into concurrent engineering today **Software and Data Technologies** Joaquim Filipe, Boris Shishkov, Markus

The Landscape of Pervasive Computing Standards Sumi Helal, 2022-05-31 This lecture presents a first compendium of established and emerging standards in pervasive computing systems The lecture explains the role of each of the covered standards and explains the relationship and interplay among them Hopefully the lecture will help piece together the various standards into a sensible and clear landscape The lecture is a digest reorganization and a compilation of several short articles that have been published in the Standards and Emerging Technologies department of the IEEE Pervasive Computing magazine The articles have been edited and shortened or expanded to provide the necessary focus and uniform coverage depth There are more standards and common practices in pervasive systems than the lecture could cover However systems perspective and programmability of pervasive spaces which are the main foci of the lecture set the scope and determined which standards should be included The lecture explains what it means to program a pervasive space and introduces the new requirements brought about by pervasive computing Among the standards the lecture covers are sensors and device standards service oriented device standards service discovery and delivery standards service gateway standards and standards for universal interactions with pervasive spaces In addition the emerging sensor platform and domestic robots technologies are covered and their essential new roles explained The lecture also briefly covers a set of standards that represents an ecosystem for the emerging pervasive healthcare industry Audiences who may benefit from this lecture include

- 1 academic and industrial researchers working on sensor based pervasive or ubiquitous computing
- 2 system integrator consultants and firms especially those concerned with integrating sensors actuators and devices to their enterprise and business systems
- 3 device smart chips and sensor manufacturers
- 4 government agencies
- 5 the healthcare IT and pervasive health industries
- 6 other industries such as logistics manufacturing and the emerging smart grid and environment sustainability industries

Alencar, 2004-02-24 Advances in networking technology have revitalized the investigation of agent technology as a promising paradigm for engineering complex distributed software systems Agent technology has been applied to a wide range of application mains including e commerce human computer interfaces telecommunications and software assistants Multi agent systems MASs and their underlying theories provide a more natural support for ensuring important properties such as autonomy mobility environment heterogeneity organization openness and

intelligence As a consequence agent based systems are likely to provide new proaches to dealing with the complexity of developing and maintaining modern software However developing robust large scale agent based systems will quire new software engineering approaches There are currently many methods and techniques for working with individual agents or with systems built using only a few agents Unfortunately agent based software engineering is still in its infancy and existing software engineering approaches are unable to cope with large MASs The complexity associated with a large MAS is considerable When a huge number of agents interact over heterogeneous environments various phenomena occur which are not as easy to capture as when only a few agents are working together As the multiple software agents are highly collaborative and operate in networked environments they have to be context aware and deal with vironment uncertainty This makes their coordination and management more di cult and increases the likelihood of exceptional situations such as security holes privacy violations and unexpected global e cts Moreover as users and softwareengineersdelegatemoreautonomytotheirMASs andputmoretrustin their results new concerns arise in real life applications
