What Big Data Can Tell Us About the Psychology of Learning and Teaching Ronnel B. King, Jiesi Guo, Ching Sing Chai, 2022-03-09 [Genes, Brains, and Human Potential](#) Ken Richardson, 2017-03-21 For countless generations people have been told that their potential as humans is limited and fundamentally unequal. The social order they have been assured is arranged by powers beyond their control. More recently the appeal has been to biology specifically the genes brain sciences the concept of intelligence and powerful new technologies Reinforced through the authority of science and a growing belief in bio determinism the ordering of the many for the benefit of a few has become more entrenched Yet scientists are now waking up to the influence of ideology on research and its interpretation In Genes Brains and Human Potential Ken Richardson illustrates how the ideology of human intelligence has infiltrated genetics brain sciences and psychology flourishing in the vagueness of basic concepts a shallow nature versus nurture debate and the overhyped claims of reductionists He shows how ideology more than pure science has come to dominate our institutions especially education encouraging fatalism about the development of human intelligence among individuals and societies Genes Brains and Human Potential goes much further building on work being done in molecular biology epigenetics dynamical systems evolution theory and complexity theory it maps a fresh understanding of intelligence and the development of human potential Concluding with an upbeat message for human possibilities this synthesis of diverse perspectives will engender new conversations among students researchers and other interested readers

Practices Simon K.S. Cheung,Lam-for Kwok,Junjie Shang,Aihua Wang,Reggie Kwan,2016-06-27 This book constitutes the refereed proceedings of the 9th International Conference on Blended Learning ICBL 2016 held in Beijing China in July 2016 The conference is formerly known as International Conference on Hybrid Learning ICHL The 34 papers presented were carefully reviewed and selected from 61 submissions The selected papers cover various aspects on collaborative and interactive learning content development open and flexible learning assessment and evaluation pedagogical and psychological issues experience in blended learning and strategies and solutions Higher Expectations Derek Bok,2022-05-17 How our colleges and universities can respond to the changing hopes and needs of society In recent decades cognitive psychologists have cast new light on human development and given colleges new possibilities for helping students acquire skills and qualities that will enhance their lives and increase their contributions to society In this landmark book Derek Bok explores how colleges can reap the benefits of these discoveries and create a more robust undergraduate curriculum for the twenty first century Prior to this century most psychologists thought that creativity empathy resilience conscientiousness and most personality traits were largely fixed by early childhood What researchers have now discovered is that virtually all of these qualities continue to change through early adulthood and often well beyond Such findings suggest that educators may be able to do much more than was previously thought possible to teach students to develop these important characteristics and thereby enable them to flourish in later life How prepared are educators to cultivate these qualities of mind and behavior What do they need to learn to capitalize on the possibilities Will college faculties embrace these opportunities and make the necessary changes in their curricula and teaching methods What can be done to hasten the process of innovation and application In providing answers to these questions Bok identifies the hurdles to institutional change proposes sensible reforms and demonstrates how our colleges can help students lead more successful productive and meaningful lives *The Bloomsbury Handbook of Early Childhood Transitions Research* Aline-Wendy Dunlop,Sally Peters,Sharon Lynn Kagan,2024-09-19 Research into early childhood transitions has become a field in its own right It is increasingly understood that a positive start in any new setting can influence the child s engagement sense of belonging well being progression in learning and agency and may be dependent on the insight of educators and families and yet there is no research methodology or research methods book dedicated to this growing field of study Including 27 chapters written by researchers from the UK New Zealand the USA Sweden Iceland Australia and Canada this handbook presents an overview of the field exploring its current debates reflects on its history and offers suggestions for the future of the field This book is an essential reference point for anyone studying or undertaking research into transitions in early childhood *Amino Acids of the Glutamate Family: Functions beyond Primary Metabolism* Sakiko Okumoto,Dietmar Funck,Maurizio Trovato,Giuseppe Forlani,2016-10-07 The life of proteins starts and ends as amino acids In addition to the primary function as protein building blocks amino acids serve multiple other purposes to make a plant s life worth living This is true especially for the amino acids

of the glutamate family namely glutamate Glu glutamine Gln proline Pro and arginine Arg as well as the product of Glu decarboxylation aminobutyric acid GABA Synthesis accumulation interconversion and degradation of these five compounds contribute in many ways to the regulation of plant development and to responses to environmental challenges Glu and Gln hold key positions as entry points and master regulators of nitrogen metabolism in plants and have a pivotal role in the regulatory interplay between carbon and nitrogen metabolism Pro and GABA are among the best studied compatible osmolytes that accumulate in response to water deficit yet the full range of protective functions is still to be revealed Arg with its exceptionally high nitrogen to carbon ratio has long been recognized as a major storage form of organic nitrogen Most of the enzymes involved in metabolism of the amino acids of the glutamate family in plants have been identified or can be predicted according to similarity with animal or microbial homologues However for some of these enzymes the detailed biochemical properties still remain to be determined in order to understand activities in vivo Additionally uncertainties regarding the subcellular localization of proteins and especially the lack of knowledge about intracellular transport proteins leave significant gaps in our understanding of the metabolic network connecting Glu Gln Pro GABA and Arg While anabolic reactions are distributed between the cytosol and chloroplasts catabolism of the amino acids of the glutamate family takes place in mitochondria and has been implicated in fueling energy demanding physiological processes such as root elongation recovery from stress bolting and pollen tube elongation Exceeding the metabolic functions the amino acids of the glutamate family were recently identified as important signaling molecules in plants Extracellular Glu GABA and a range of other metabolites trigger responses in plant cells that resemble the actions of Glu and GABA as neurotransmitters in animals Plant homologues of the Glu gated ion channels from mammals and protein kinase signaling cascades have been implicated in these responses Pollen tube growth and guidance depend on GABA signaling and the root architecture is specifically regulated by Glu GABA and Pro signaling or metabolism were shown to contribute to the orchestration of defense and programmed cell death in response to pathogen attacks Pro signaling was additionally proposed to regulate developmental processes and especially sexual reproduction Arg is tightly linked to nitric oxide NO production and signaling in plants although Arg dependent NO synthases could still not be identified Potentially Arg derived polyamines constitute the missing link between Arg and NO signaling in response to stress Taken together the amino acids of the glutamate family emerge as important signaling molecules that orchestrate plant growth and development by integrating the metabolic status of the plant with environmental signals especially in stressful conditions This research topic collects contributions from different facets of glutamate family amino acid signaling or metabolism to bring together and integrate in a comprehensive view the latest advances in our understanding of the multiple functions of Glu derived amino acids in plants

solution seems elusive After all don't kids need phones and won't they be vulnerable or socially isolated without tech Clare Morell fellow at the Ethics and Public Policy Center and director of its Technology and Human Flourishing Project argues that the answer is no She exposes the lies parents have been sold about managing the dangers of tech through parental controls and screen time limits and demonstrates that another way is possible even if your children are already using smartphones or social media The Tech Exit maps a doable pathway to freedom from digital technology for families local communities and society Drawing on dozens of interviews with experts and with families who have gone tech free as well as Morell's own work as a policy expert The Tech Exit shows how digital technology is anything but necessary for children to live happy healthy and socially full lives The Tech Exit is essential reading for any parent who has felt stuck between an awareness of the dangers of digital technology for kids and the feeling that tech is necessary and inevitable Clare Morell's message is simple and compelling You and your family can be free The life you want for your children is within reach

Breaking Point Rebecca Schwartz Greene, 2023-01-03 WINNER SOCIETY FOR MILITARY HISTORY DISTINGUISHED BOOK AWARDS FIRST BOOK This book informs the public for the first time about the impact of American psychiatry on soldiers during World War II *Breaking Point* is the first in depth history of American psychiatry in World War II Drawn from unpublished primary documents oral histories and the author's personal interviews and correspondence over years with key psychiatric and military policymakers it begins with Franklin Roosevelt's endorsement of a universal Selective Service psychiatric examination followed by Army and Navy pre and post induction examinations Ultimately 2.5 million men and women were rejected or discharged from military service on neuropsychiatric grounds Never before or since has the United States engaged in such a program In designing Selective Service Medical Circular No. 1 psychiatrist Harry Stack Sullivan assumed psychiatrists could predict who might break down or falter in military service or even in civilian life thereafter While many American and European psychiatrists questioned this belief and huge numbers of American psychiatric casualties soon raised questions about screening's validity psychiatric and military leaders persisted in 1942 and 1943 in endorsing ever tougher screening and little else Soon families complained of fathers and teens being drafted instead of being identified as psychiatric 4Fs and Blacks and Native Americans among others complained of bias A frustrated General George S. Patton famously slapped two malingering neuropsychiatric patients in Sicily a sentiment shared by Marshall and Eisenhower though they favored a tamer style Yet psychiatric rejections, evacuations and discharges mounted While psychiatrist Roy Grinker and a few others treated soldiers close to the front in Tunisia in early 1943 this was the exception But as demand for manpower soared and psychiatrists finally went to the field and saw that combat itself not predisposition precipitated breakdown leading military psychiatrists switched their emphasis from screening to prevention and treatment But this switch was too little too late and slowed by a year long series of Inspector General investigations even while numbers of psychiatric casualties soared Ironically despite and even partly because of psychiatrists' wartime performance plus the emotional toll of

war postwar America soon witnessed a dramatic growth in numbers popularity and influence of the profession culminating in the National Mental Health Act 1946 But veterans with PTSD not recognized until 1980 were largely neglected
