Winfree,2013-06-29 As I review these pages the last of them written in Summer 1978 some retrospective thoughts come to
mind which put the whole business into better perspective for me and might aid the prospective reader in choosing how to
approach this volume The most conspicuous thought in my mind at present is the diversity of wholly independent
explorations that came upon phase singularities in one guise or another during the past decade My efforts to gather the
published literature during the last phases of actually writing a whole book about them were almost equally divided between
libraries of Biology Chemistry Engineering Mathematics Medicine and Physics A lot of what I call gathering was done
somewhat in anticipation in the form of conjecture query and prediction based on analogy between developments in different
fields The consequence throughout 1979 was that our long suffering publisher repeatedly had to replace such material by
citation of unexpected flurries of papers giving substantive demonstration I trust that the authors of these many excellent
reports and especially of those I only found too late will forgive the brevity of allusion I felt compelled to observe in these
substitutions A residue of loose ends is largely collected in the index under QUERIES It is clear to me already that the
materials I began to gather several years ago represented only the first flickering of what turns out to be a substantial

The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends **Mobile Technologies and Handheld Devices for Ubiquitous Learning: Research and Pedagogy** Ng, Wan,2010-08-31 Mobile Technologies and Handheld Devices for Ubiquitous Learning Research and Pedagogy provides readers with a rich collection of research informed ideas for integrating mobile technologies into learning and teaching Each chapter looks critically at the issues related benefits and limitations of learning ubiquitously within the context of the research reported New and emerging technologies present challenges for education
