Nonlinear Meta-Optics Costantino De Angelis, Giuseppe Leo, Dragomir N. Neshev, 2020-05-20 This book addresses fabrication as well as characterization and modeling of semiconductor nanostructures in the optical regime with a focus on nonlinear effects The visible range as well as near and far infrared spectral region will be considered with a view to different envisaged applications The book covers the current key challenges of the research in the area including exploiting new material platforms fully extending the device operation into the nonlinear regime adding re configurability to the envisaged devices and proposing new modeling tools to help in conceiving new functionalities Explores several topics in the field of semiconductor nonlinear nanophotonics including fabrication characterization and modeling of semiconductor nanostructures in the optical regime with a focus on nonlinear effects Describes the research challenges in the field of optical metasurfaces in the nonlinear regime Reviews the use and achievements of all dielectric nanoantennas for strengthening the nonlinear optical response Describes both theoretical and experimental aspects of photonic devices based on semiconductor optical nanoantennas and metasurfaces Gathers contributions from several leading groups in this research field to provide a thorough and complete overview of the current state of the art in the field of semiconductor nonlinear nanophotonics Costantino De Angelis has been full professor of electromagnetic fields at the University of Brescia since 1998 He is an OSA Fellow and has been responsible for several university research contracts in the last 20 years within Europe the United States and Italy His technical interests are in optical antennas and nanophotonics He is the author of over 150 peer reviewed scientific journal articles Giuseppe Leo has been a full professor in physics at Paris Diderot University since 2004 and in charge of the nonlinear devices group of MPQ Laboratory since 2006 His research areas include nonlinear optics micro and nano photonics and optoelectronics with a focus

on AlGaAs platform He has coordinated several research programs and coauthored 100 peer reviewed journal articles 200 conference papers 10 book chapters and also has four patents Dragomir Neshev is a professor in physics and the leader of the experimental photonics group in the Nonlinear Physics Centre at Australian National University ANU His activities span over several branches of optics including nonlinear periodic structures singular optics plasmonics and photonic metamaterials He has coauthored 200 publications in international peer reviewed scientific journals *"Progress in Physics," vol. 21, no. 1, 2025* Dmitri Rabounski, Pierre Millette, Andreas Ries, Florentin Smarandache, Larissa Borissova, Ebenezer Chifu, This issue of Progress in Physics features a collection of articles on theoretical and experimental physics as well as related topics in mathematics The main theme appears to be a re evaluation of fundamental concepts in physics with several papers discussing alternatives to established theories One article proposes correct solutions for rotating and charged black holes suggesting they have an oblate spheroid shape rather than being perfectly spherical Another paper presents a new cosmology framework based on a Krogh gravity theory that predicts the Hubble redshift curve without needing concepts like dark energy or expansion Other topics include an analysis of fundamental forces from numerical relations a re examination of quantum mechanics in the microworld and the feasibility of non quantum teleportation

Progress in Physics, vol. 3/2006 Dmitri Rabounski Larissa Borissova, Florentin Smarandache, Larissa Borissova, Progress in Physics has been created for publications on advanced studies in theoretical and experimental physics including related themes from mathematics *Neutrosophic Physics: More Problems, More Solutions (Collected Papers)* Florentin Smarandache, 2010 In this concern neutrosophic logics and neutrosophy in general established by Prof Smarandache is one of the promising research instruments which could be successfully applied by a theoretical physicist Naturally neutrosophic logics being a part of modern logics states that neutralities may be between any physical states or states of space time In particular this leads sometimes to paradoxist situations when two opposite states are known in physics while the neutral state between them seems absolutely impossible from a physical viewpoint Meanwhile when considering the theoretically possible neutralities in detail we see that these neutral states indicate new phenomena which were just discovered by the experimentalists in the last decade or shows a new field for further experimental studies as for example unmatter which is a state between matter and antimatter Research papers presented in this collection manifest only a few of many possible applications of neutrosophic logics to theoretical physics D Rabounski The multi space with its multi structure is a Theory of Everything It can be used for example in the Unified Field Theory that tries to unite the gravitational electromagnetic weak and strong interactions in physics F Smarandache *Flight Physics* Konstantin Volkov, 2018-02-14 The book focuses on the synthesis of the fundamental disciplines and practical applications involved in the investigation description and analysis of aircraft flight including applied aerodynamics aircraft propulsion flight performance stability and control The book covers the aerodynamic models that describe the forces and moments on maneuvering aircraft and provides an overview of the concepts

and methods used in flight dynamics Computational methods are widely used by the practicing aerodynamicist and the book covers computational fluid dynamics techniques used to improve understanding of the physical models that underlie computational methods

Microsystems for Enhanced Control of Cell Behavior Andrés Díaz Lantada, 2016-03-23 This handbook focuses on the entire development process of biomedical microsystems that promote special interactions with cells Fundamentals of cell biology and mechanobiology are described as necessary preparatory input for design tasks Advanced design simulation and micro nanomanufacturing resources whose combined use enables the development of biomedical microsystems capable of interacting at a cellular level are covered in depth A detailed series of chapters is then devoted to applications based on microsystems that offer enhanced cellular control including microfluidic devices for diagnosis and therapy cell based sensors and actuators smart biodevices microstructured prostheses for improvement of biocompatibility microstructured and microtextured cell culture matrices for promotion of cell growth and differentiation electrophoretic microsystems for study of cell mechanics microstructured and microtextured biodevices for study of cell adhesion and dynamics and biomimetic microsystems including organs on chips among others Challenges relating to the development of reliable in vitro biomimetic microsystems the design and manufacture of complex geometries and biofabrication are also discussed
