### Section 2: Biodiversity at Risk

Read the passage below and answer the questions that follow.

Like rain forests, coral reefs occupy a small fraction of the marine environment yet contain the majority of the biodiversity there. Reefs provide millions of people with food, tourism revenue, coastal protection, and sources of new chemicals. One study in 1998 estimated the value of these services to be \$375 billion per year. But reefs are poorly studied and not as well protected by laws as terrestrial areas are. Nearly 60 percent of Earth's coral reefs are threatened by human activities, such as development along waterways, over fishing, and pollution. Similar threats affect coastal ecosystems, such as swamps, marshes, shores, and kelp beds. Coastal areas are travel routes for many migrating species as well as links to ecosystems on land.

#### IDENTIFYING MAIN IDEAS

One reading skill is the ability to identify the main idea of a passage. The main idea is the main focus or key idea. Frequently, a main idea is accompanied by supporting information that offers detailed facts about main ideas.

Read each question and write the answer in the space provided.

1. How much of the marine environment do coral reefs make up?  
A small fraction is made up by coral reefs.
2. What percentage of coral reefs are threatened by human activity?  
by a 60%.
3. How much of the marine environment's biodiversity is contained in Earth's coral reefs?  
the majority of biodiversity
4. How much money are the coral reefs worth, according to one study?  
\$ 375 billion per year
5. Which are better protected by laws, terrestrial areas or coral reef areas?  
terrestrial areas
6. Name four reasons why coral reefs are beneficial to humans.  
they are a source of food, money from tourism, coastal protection and new chemicals
7. Name four types of coastal ecosystems.  
Swamps, marshes, shores, Kelp beds

**Carnivoran Ecology** Steven W. Buskirk,2023-04-17 These charismatic mammals which include dogs cats hyenas weasels mongooses seals sea lions and bears have always held special importance to humans throughout history

and continue to do so today In recent decades the emergence of new technologies has completely transformed our knowledge of how carnivorans interact with their environments and consequently reshaped our view of carnivoran ecology This unique synthesis uses examples from a diverse and expanding carnivoran literature drawing from all carnivoran families and spanning the world s oceans and continents to produce a clearly written and richly illustrated book that reviews our current state of knowledge of carnivoran ecology It addresses all levels of biological organization and function from genes to enzymes organisms populations and ecosystems Special attention is given to how carnivoran species interact with their prey each other and humans There is an emphasis on community interactions and their importance in carnivoran evolution showing how evolutionary constraints morphological physiological and behavioral structure communities today The book s approach is strongly comparative contrasting herbivores with carnivores predators with scavengers and cats with dogs Carnivorans play important roles in many high profile conservation cases either as species of concern or agents of endangerment and their importance is demonstrated in both contexts Carnivoran Ecology is an accessible advanced textbook aimed principally at senior undergraduate and graduate students taking courses in carnivore ecology as well as a broad audience of professional academics especially carnivore and mammalian biologists researchers and practitioners working in both governmental and non governmental organizations A significant secondary market will exist amongst the large amateur naturalist community including those wishing to explore the ecological and evolutionary links between domestic carnivorans dogs cats ferrets etc and their wild counterparts      Theoretical Approaches to Community Ecology Luís
