Fostering Children's Mathematical Power Arthur

Baroody, Arthur J. Baroody, Jesse L.M. Wilkins, Ronald T. Coslick, 1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world To meet the challenges of the 21st century students will especially need mathematical power a positive disposition toward mathematics curiosity and self confidence facility with the processes of mathematical inquiry problem solving reasoning and communicating and well connected mathematical knowledge an understanding of mathematical concepts procedures and formulas This guide seeks to help teachers achieve the capability to foster children s mathematical power the ability to excite them about mathematics help them see that it makes sense and enable them to harness its might for solving everyday and extraordinary problems The investigative approach attempts to foster mathematical power by making mathematics instruction process based understandable or relevant to the everyday life of students Past efforts to reform mathematics instruction have focused on only one or two of these aims whereas the investigative approach accomplishes all three By teaching content in a purposeful context an inquiry based fashion and a meaningful manner this approach promotes children s mathematical learning in an interesting thought provoking and comprehensible way This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom It not only dispenses information but also serves as a catalyst for exploring conjecturing about discussing and contemplating the teaching and learning of mathematics

Structural Learning (Volume 2) Joseph M.

Scandura, 2017-09-13 Originally published in 1976 this title is an edited volume and reflects the major approaches being taken in structural learning at the time Chapter 1 deals with the basic question of whether competence knowledge should be characterized in terms of rules automata on the one hand or associations on the other The bulk of Chapter 2 is devoted to a series of earlier experiments on rule learning by the editor and his associates The two contributions in Chapter 3 deal with graph theoretical models Piagetian models constitute the subject of Chapter 4 Chapter 5 deals with attempts to stimulate human behaviour with a computer Chapter 6 ranges over a wide variety of competence models with particular reference to logic and mathematics In Chapter 7 the editor proposes a new theory of structural learning together with some empirical results

into two parts The first part examines thinking about the learner and includes the following constructs constructivisms activity theory and didactics Beginning with a chapter dedicated to the classic tasks used by researchers to probe learners understanding readers are encouraged to try these theories themselves with learners and be knowledgeable when they encounter them in other writing The second part focuses on thinking and teaching and includes issues of getting started keeping going and bringing to a conclusion Bringing together writing from Balacheff Brousseau Bruner Cobb Comfrey Freudenthal Greeno Marton Piaget Schon Vygotsky and many others this unique examination of constructs in mathematics education will be a valuable resource for anyone reading literature related to learning mathematics be they a teacher adviser or a student on a masters or PhD course

Resources in Education ,1994 [OE \[publication\]](#) ,1968 **Thinking and Problem Solving** Richard E. Mayer,1977 [The Transfer of Cognitive Skill](#) Mark K. Singley,John Robert Anderson,1989 The issue of the transfer of learning from one domain to another is a classic problem in psychology and an educational question of great importance which this book sets out to solve through a theory of transfer based on a comprehensive theory of skill acquisition [Computers in Elementary Mathematics Education](#) Douglas H. Clements,1989 *Learning Mathematics* Anthony Orton,2004-10-01 Why do some students achieve more than others Do we have to wait until pupils are ready Can children discover math for themselves Does language interfere with the learning of math This classic text written from the viewpoint of the math teacher provides answers to these and many more questions Each chapter explores a particular issue that illustrates the interaction between theory and practice New chapters have been included on cognition pattern and ICT *Educational Specifications for a Comprehensive Elementary Teacher Education Program* University of Toledo,1968 **Excursions into Mathematics** Anatole Beck,2020-02-24 Since it was first published three decades ago Excursions Into Mathematics has been one of the most popular mathematical books written for a general audience Taking the reader for short excursions into several specific disciplines of mathematics it makes mathematical concepts accessible to a wide audience The Millennium Edition is updated with current research and new solutions to outstanding problems that have been discovered since the last edition was printed such as the solution to the well known four color problem Excursions Into Mathematics The Millennium Edition is an exciting revision of the original much loved classic Everyone with an interest in mathematics should read this book [Large-Scale Studies in Mathematics Education](#) James A. Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use

of large data sets wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community. In fact, currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them. This volume is unique as it directly discusses methodological issues in large scale studies and reports empirical data from large scale studies.
