Building a Website: Understanding the Basics of HTML and CSS

1. Introduction to HTML and CSS

Web design involves creating a visual representation of a website using HTML and CSS. HTML (Hypertext Markup Language) is the backbone of web pages, while CSS (Cascading Style Sheets) is used to style and format the content.

This document is designed to help you understand the basics of HTML and CSS. It covers the following topics:

- What is HTML and CSS?
- How to create a simple web page using HTML and CSS.
- How to style a web page using CSS.
- How to create a responsive web page.

The document is divided into two main sections: HTML and CSS. The HTML section covers the basics of HTML, including the structure of a web page, the use of tags, and the use of attributes. The CSS section covers the basics of CSS, including the use of selectors, the use of properties, and the use of values.

2. HTML Basics

HTML is a markup language used to create web pages. It consists of a series of tags that are used to structure and format the content of a web page. The most basic HTML tag is the `<h1>` tag, which is used to create a heading. Other common tags include `<p>` (paragraph), `<a>` (link), and `<img>` (image).

HTML is a declarative language, meaning that you simply state what you want the browser to do, rather than telling it how to do it. For example, to create a link, you would use the `<a>` tag and specify the URL of the link. The browser would then automatically create the link for you.

HTML is a standard language, meaning that it is the same everywhere. This makes it easy to create web pages that will look the same on any browser.

3. CSS Basics

CSS is a style sheet language used to describe the appearance of web pages. It is used to control the layout, colors, and fonts of a web page. CSS is a declarative language, meaning that you simply state what you want the browser to do, rather than telling it how to do it.

CSS is a standard language, meaning that it is the same everywhere. This makes it easy to create web pages that will look the same on any browser.

CSS is a powerful tool for creating beautiful web pages. It allows you to control every aspect of the appearance of a web page, from the colors and fonts to the layout and spacing.
