Tang, Mika Sillanpää, 2018-10-16 The important resource that explores the twelve design principles of sustainable environmental engineering Sustainable Environmental Engineering SEE is to research design and build Environmental Engineering Infrastructure System EEIS in harmony with nature using life cycle cost analysis and benefit analysis and life cycle assessment and to protect human health and environments at minimal cost The foundations of the SEE are the twelve design principles TDPs with three specific rules for each principle The TDPs attempt to transform how environmental engineering could be taught by prioritizing six design hierarchies through six different dimensions Six design hierarchies are prevention recovery separation treatment remediation and optimization Six dimensions are integrated system material economy reliability on spatial scale resiliency on temporal scale and cost effectiveness In addition the authors two experts in the field introduce major computer packages that are useful to solve real environmental engineering design problems. The text presents how specific environmental engineering issues could be identified and prioritized under climate change through quantification of air water and soil quality indexes For water pollution control eight innovative technologies which are critical in the paradigm shift from the conventional environmental engineering design to water resource recovery facility WRRF are examined in detail These new processes include UV disinfection membrane separation technologies Anammox membrane biological reactor struvite precipitation Fenton process photocatalytic oxidation of organic pollutants as well as green infrastructure Computer tools are provided to facilitate life cycle cost and benefit analysis of WRRF This important resource Includes statistical analysis of engineering design parameters using Statistical Package for the Social Sciences SPSS Presents Monte Carlos simulation using Crystal ball to quantify uncertainty and sensitivity of design parameters Contains design methods of new energy materials processes products and system to achieve energy positive WRRF that are illustrated with Matlab Provides information on life cycle costs in terms of capital and operation for different processes using MatLab Written for senior or graduates in environmental or chemical engineering Sustainable Environmental Engineering defines and illustrates the TDPs of SEE Undergraduate graduate and engineers should find the computer codes are useful in their EEIS design The exercise at the end of each chapter encourages students to identify EEI engineering problems in their own city and find creative solutions by applying the TDPs For more information please visit www tang fiu edu **New Business for Old Europe** Arnold Tukker, Ursula Tischner, 2017-09-29 Selling products used to be the standard way of doing business Traditionally it is left to the user to transform the purchase of a product into something that fulfils effectively a final user need Today two

streams of research business management and sustainability normally with very distinct perspectives on the world have surprisingly converged to form a common conclusion selling products is old fashioned business Companies should switch their focus to selling need fulfilment satisfaction or experiences Or in other words selling integrated solutions or product services The business management literature argues that by focusing on the integrated final client needs and delivering integrated solutions fulfilling these needs companies will be able to improve their position in the value chain enhance added value of their offering and improve their innovation potential In a business world where many products are becoming equally well performing commodities this strategy is one of the ways to avoid a sheer competition on price a type of competition that Europe never can win with emerging and low cost economies such as China In that sense product services can mean new business for old Europe The sustainability knowledge stream argues that need focused solutions could be inherently more sustainable than products Product services could offer the value of use instead of the product itself and decrease the environmental load in two ways First companies offering the service would have all the incentives to make the product system efficient as they get paid by the result Second consumers would be encouraged to alter their behaviour as they gain insight into all the costs involved with the use Until today the connections and interchange between the two research streams have been guite limited. The guestion of whether product services truly are the avenue to a sustainable world is still under discussion This book aims to develop a systematic view on this issue The potential of product services to enhance competitiveness and contribute to sustainable development prompted the EU to invest heavily in the theme under the EU s 5th Framework Programme FP5 1997 2002 A variety of research and development projects in the field were supported under the umbrella of the Sustainable Product Development Network SusProNet These included MEPSS Methodology Product Service Systems Home Services HiCS Highly Customerised Solutions Prosecco Product Service Co design and Innopse Innovation Studio and exemplary developments for Product Service The projects were undertaken by a mix of European research institutions and companies including Orange Philips and Nokia Some of these projects focused on developing methods that could help industries change their output from a product to a service Others focused on the development of new product services or solutions HiCS Prosecco Innopse and yet others tried to analyze under which circumstances product services are likely to be implemented and accepted by consumers Home Services One project focused on dissemination of the concept to SMEs Lean Services Other projects focused purely on new product service development such as Brainfridge an intelligent fridge managing its supply chain ASP NET application service providers Protex intelligent enzymes and IPSCON receivers for wireless telephones New Business for Old Europe brings together the key outputs from all of these groups to present a state of the art collection on product service development prospects and implications for competitiveness and sustainability The book has a number of aims First it attempts to bridge the gap between business and sustainability literature to lead to a better founded understanding of the business drivers for embarking on product service development

and its relation with sustainability and competitiveness Second the book reviews the large amount of studies that have developed toolkits methods and approaches that can support marketers product developers and strategists in business to develop product services selects the best practice approaches and analyses any gaps Third the book examines what opportunities there are for product service development in a variety of key areas including base materials information and communication technologies offices food and households Each chapter in this section discusses the area developments that will stimulate or hinder the market opportunities for product services product service examples and typical implementation challenges for product services in that area These chapters serve as a quick introduction for companies interested in developing product services in a specific area Fourth the book translates all the lessons into suggested approaches for product service development by companies Annexes include a lightweight product service development manual and an Innovative Technology and Sustainable Engineering Noppakun alphabetical list of useful underlying tools Sanpo, Jirasak Tharajak, Paisan Kanthang, 2017-06-06 7th RMUTP ICONSCI Selected peer reviewed papers from the 7th RMUTP International Conference on Science Technology and Innovation for Sustainable Development Challenges towards the Green Innovative Society June 23 24 2016 Bangkok Thailand 28th European Symposium on Computer Aided Process Engineering Stefan Radl, Jiří Jaromír Klemeš, Petar Sabev Varbanov, Thomas Wallek, 2018-06-26 28th European Symposium on Computer Aided Process Engineering Volume 43 contains the papers presented at the 28th European Society of Computer Aided Process Engineering ESCAPE event held in Graz Austria June 10 13 2018 It is a valuable resource for chemical engineers chemical process engineers researchers in industry and academia students and consultants for chemical industries Presents findings and discussions from the 28th European Society of Computer Aided Process Engineering ESCAPE event
