Information Modeling For Interoperable Dimensional Metrology:

Information Modeling for Interoperable Dimensional Metrology Y Zhao, T Kramer, Robert Brown, Xun Xu, 2011-08-28 Dimensional metrology is an essential part of modern manufacturing technologies but the basic theories and measurement methods are no longer sufficient for today's digitized systems The information exchange between the software components of a dimensional metrology system not only costs a great deal of money but also causes the entire system to lose data integrity Information Modeling for Interoperable Dimensional Metrology analyzes interoperability issues in dimensional metrology systems and describes information modeling techniques It discusses new approaches and data models for solving interoperability problems as well as introducing process activities existing and emerging data models and the key technologies of dimensional metrology systems Written for researchers in industry and academia as well as advanced undergraduate and postgraduate students this book gives both an overview and an in depth understanding of complete dimensional metrology systems By covering in detail the theory and main content techniques and methods used in dimensional metrology systems Information Modeling for Interoperable Dimensional Metrology enables readers to solve real world dimensional measurement problems in modern dimensional metrology practices **Proceedings of the 37th**

International MATADOR Conference Srichand Hinduja, Lin Li, 2012-10-09 Presented here are 97 refereed papers given at the 37th MATADOR Conference held at The University of Manchester in July 2012 The MATADOR series of conferences covers the topics of Manufacturing Automation and Systems Technology Applications Design Organisation and Management and Research The Proceedings of this Conference contain original papers contributed by researchers from many countries on different continents The papers cover the principles techniques and applications in aerospace automotive biomedical energy consumable goods and process industries The papers in this volume reflect the importance of manufacturing to international wealth creation the emerging fields of micro and nano manufacture the increasing trend towards the fabrication of parts using lasers the growing demand for precision engineering and part inspection techniques and the changing trends in manufacturing within a global environment **An Intelligent Inspection Planning System for Prismatic Parts on**

CMMs Slavenko M. Stojadinović, Vidosav D. Majstorović, 2019-02-09 This book examines an intelligent system for the inspection planning of prismatic parts on coordinate measuring machines CMMs The content focuses on four main elements the engineering ontology the model of inspection planning for prismatic parts on CMMs the optimisation model of the measuring path based on an ant colony approach and the model of probe configuration and setup planning based on a genetic algorithm The model of inspection planning for CMMs developed here addresses inspection feature construction the sampling strategy probe accessibility analysis automated collision free operation and probe path planning The proposed model offers a novel approach to intelligent inspection while also minimizing human involvement and thus the risk of human error through intelligent planning of the probe configuration and part setup The advantages of this approach include reduced

preparation times due to the automatic generation of a measuring protocol potential optimisation of the measuring probe path i.e. less time needed for the actual measurement and increased planning process autonomy through minimal human involvement in the setup analysis and probe configuration

Proceedings of the 4th International Conference on the Industry 4.0 Model for Advanced Manufacturing Laszlo Monostori, Vidosav D. Majstorovic, S. Jack Hu, Dragan Djurdjanovic, 2019-04-30 This book gathers the proceedings of the 4th International Conference on the Industry 4.0 Model for Advanced Manufacturing AMP 2019 held in Belgrade Serbia on 3-6 June 2019. The event marks the latest in a series of high level conferences that bring together experts from academia and industry to exchange knowledge, ideas, experiences, research findings and information in the field of manufacturing. The book addresses a wide range of topics including design of smart and intelligent products, developments in CAD/CAM technologies, rapid prototyping and reverse engineering, multistage manufacturing processes, manufacturing automation in the Industry 4.0 model, cloud based products and cyber physical and reconfigurable manufacturing systems. By providing updates on key issues and highlighting recent advances in manufacturing engineering and technologies, the book supports the transfer of vital knowledge to the next generation of academics and practitioners. Further, it will appeal to anyone working or conducting research in this rapidly evolving field.

Best Practices in Lean Manufacturing José Roberto Díaz-Reza, Jorge Luis García Alcaraz, Adrián Salvador Morales García, 2022-03-19 This book reports four structural equation models (SEM) for quantifying the relationship between the most important lean manufacturing (LM) practices applied to the manufacturing industry. The SEMs are evaluated using 220 responses to a survey applied to manufacturing companies applying LM principles in the production system and are related to distribution and maintenance, production process and quality system, supply chain and quality, and an integrator model. The findings identify the most important activities for every LM practice and how they are related. These relationship values will help administrators, managers, engineers to focus their efforts on these most important activities, facilitating the decision making process.
