Anticoagulants increase the risk for bleeding during surgery and the postoperative period, so the nurse must explain the need to hold the warfarin prior to surgery and instruct the client to contact the surgeon to determine how long before surgery the medication should be stopped.

The nurse then reviews Ms. Jackson's preoperative lab test results, drawn earlier in the week.

The nurse talks with Ms. Jackson about what to expect the day of surgery and during the immediate postoperative period. The nurse provides instructions regarding cough and deep breathing exercises. Ms. Jackson performs a return demonstration by breathing in through her mouth deeply and exhaling through pursed lips forcefully and rapidly.

4. What action should the nurse implement?
