Freed,Ryan E. Grady,2018-10-25 This volume contains the proceedings of the NSF CBMS Regional Conference on Topological and Geometric Methods in QFT held from July 31 August 4 2017 at Montana State University in Bozeman Montana In recent decades there has been a movement to axiomatize quantum field theory into a mathematical structure In a different direction one can ask to test these axiom systems against physics Can they be used to rederive known facts about quantum theories or better yet be the framework in which to solve open problems Recently Freed and Hopkins have provided a solution to a classification problem in condensed matter theory which is ultimately based on the field theory axioms of Graeme Segal Papers contained in this volume amplify various aspects of the Freed Hopkins program develop some category theory which lies behind the cobordism hypothesis the major structure theorem for topological field theories and relate to Costello s approach to perturbative quantum field theory Two papers on the latter use this framework to recover fundamental results about some physical theories two dimensional sigma models and the bosonic string Perhaps it is surprising that such sparse axiom systems encode enough structure to prove important results in physics These successes can be taken as encouragement that the axiom systems are at least on the right track toward articulating what a quantum field theory is **String-Math 2013** Ron Donagi, Michael R. Douglas,Ljudmila Kamenova,Martin Rocek,2014-12-02 This volume contains the proceedings of the conference String Math 2013 which was held June 17 21 2013 at the Simons Center for Geometry and Physics at Stony Brook University This was the third in a series of annual meetings devoted to the interface of mathematics and string theory Topics include the latest developments in supersymmetric and topological field theory localization techniques the mathematics of quantum field theory superstring compactification and duality scattering amplitudes and their relation to Hodge theory mirror symmetry and two dimensional conformal field theory and many more This book will be important reading for researchers and students in the area and for all mathematicians and string theorists who want to update themselves on developments in the math string interface **Vector Partitions, Visible Points and Ramanujan Functions** Geoffrey B. Campbell,2024-05-29 Vector Partitions Visible Points and Ramanujan Functions offers a novel theory of Vector Partitions though very much grounded in the long established work of others that could be developed as an extension to the existing theory of Integer Partitions The book is suitable for graduate students in physics applied mathematics number theory and computational mathematics It takes the reader up to research level presenting new results alongside known classical results from integer partitions and areas of vector and multipartite partition theory It also sets forth new directions for research for the more advanced reader Above all the intention of the book is to bring new inspiration to others who study mathematics and related areas It is hoped that some new ideas will be launched to add value and insight into many of the classical and

new theories surrounding partitions The book is an appreciation of the many gifted authors of research into partitions over the past century and before in the hope that more may come of this for future generations Features Provides a step by step guide through the known literature on Integer and Vector Partitions and a focus on the not so well known Visible Point Vector identities Serves as a reference for graduate students and researchers in physics applied mathematics number theory and computational mathematics Offers a variety of practical examples as well as sets of exercises suitable for students and researchers Geoffrey B Campbell completed his PhD at Australian National University in 1998 under the esteemed physicist Professor Rodney Baxter His affiliation with the Australian National University Mathematical Sciences Institute has continued for over 30 years Within that time frame Geoffrey also served eight years as an Honorary Research Fellow at LaTrobe University Mathematics and Statistics Department in Melbourne Currently he writes ongoing articles for the Australian Mathematical Society Gazette Within the international scope Geoffrey currently serves as a PhD external committee member for a mathematics graduate student at Washington State University in America Geoffrey has built a career within Australian Commonwealth and State government departments including as an Advisor at the Department of Prime Minister and Cabinet as Analyst Researcher for a Royal Commission Geoffrey specializes in complex data machine learning including data analytics He is also a published poet in Australian anthologies and literary magazines **Open Problems in Algebraic Combinatorics** Christine Berkesch,Benjamin Brubaker,Gregg Musiker,Pavlo Pylyavskyy,Victor Reiner,2024-08-21 In their preface the editors describe algebraic combinatorics as the area of combinatorics concerned with exact as opposed to approximate results and which puts emphasis on interaction with other areas of mathematics such as algebra topology geometry and physics It is a vibrant area which saw several major developments in recent years The goal of the 2022 conference Open Problems in Algebraic Combinatorics 2022 was to provide a forum for exchanging promising new directions and ideas The current volume includes contributions coming from the talks at the conference as well as a few other contributions written specifically for this volume The articles cover the majority of topics in algebraic combinatorics with the aim of presenting recent important research results and also important open problems and conjectures encountered in this research The editors hope that this book will facilitate the exchange of ideas in algebraic combinatorics
