Jihyun Lee, Lazar Stankov, 2017-10-02 It is becoming increasingly clear that non cognitive psychological processes are important for students school achievement even to the point where their influence may be stronger than that exerted by the parents teachers or the school atmosphere itself Non cognitive psychological variables refer to varieties of self beliefs and goal orientations such as anxiety confidence self efficacy and self concept which are often seen as dispositional and motivational in nature It is particularly important to highlight the role that confidence and self efficacy play in school achievement as these two self beliefs are related to metacognitive processing the awareness of what you know and what you do not know Self concept meanwhile tends to exert its influence on an individual s choice of tertiary level courses This book suggests that by focusing on students self beliefs the education system may be in a position to improve cognitive performance since individual students self beliefs may be more malleable than the cognitive processes involved in acquiring academic knowledge Focusing on these non cognitive psychological processes is also likely to be more effective in improving performance than system wide interventions involving changes in policy for both public and private sector educators This book will be useful to educational researchers school leaders administrators counsellors and teachers in guiding students attitudes towards learning and school performance It will also provide students in psychology and education with broad and nuanced insights into the drivers of school achievement This book was originally published as a special issue of Educational Psychology Goyal's ICSE Biology Question Bank with Model Test Papers For Class 10 Semester 2 Examination 2022 Goyal Brothers Prakashan, 2021-12-15 CISCE s Modified Assessment Plan for Academic Year 2021 22 Reduced and Bifurcated Syllabus for Semester 2 Examination Chapterwise Summary and Important Points Chapterwise Question Bank

Education in the Global City Aaron Koh, Terence Chong, 2017-10-02 Education in the Global City examines education in Singapore through the critical lens of manufacturing. The book brings together two disparate fields which inform each other: education and the global city. The book's contributors analyse and critique the manufacturing of Singapore education and Singapore's global city formation. The collection covers vocational education, language policies, Higher Education, English education, critical thinking, sex education, creativity, and critical feminist scholarship. Collectively, the book pries open the ideology of the manufacturing education system and points out the tension between the nation and its ideologies and the global city aspirations. It also asks how education contributes to and is shaped by the market realities of Singapore's global city ambitions, which are at odds with the nationalistic local agenda and priorities of nation building. In interrupting and speaking against the prevailing and narrow manufacturing of education for a teleological end in spite of Singapore's successful nation building, this book is an important contribution to critical education scholarship. This book was originally published as a special issue of *Discourse Studies in the Cultural Politics of Education*. **Research in Education**, 1974
