*Geomorphology: The Great Sand Dunes National Park*

Declared a national monument by the National Parks and Preserve Act of 2000, the Great Sand Dunes are the largest dunes in North America, rising a staggering 750 feet; the dunes are located at the base of an alcove in the Sangre de Cristo Mountain Range in Colorado. For geographical clarity, it is important to note that both the San Juan and Sangre de Cristo Mountain Ranges are part of the larger Rocky Mountains and are separated by the San Luis Valley.

**Building the Great Sand Dunes**

While it is commonly accepted that the Great Sand Dunes are a young landform, a precise age has not been determined. “U.S. Geological Survey geologists estimate that the dunes are between a couple of thousand years and 12,000 years old....”<sup>1</sup> What is lucidly understood, however, is the process and structure by which the sand dunes are created and maintained.

Building the Great Sand Dunes National Park requires four predominant factors—plentiful loose sediment deposits, strong winds, a permanent sand trap structure, and a method by which to control the expansion or migration of the dunes. Loose sediment in the form of sand, silt, and gravel exists in abundance across the floor of the San Luis Valley; “[t]he sand is blown by prevailing southwesterly wind from alluvial sediments of the San Luis Valley. Sand mineralogy indicates that much of the sediment was derived from volcanic rocks of the San Juan Mountains, transported by the Rio Grande, and deposited in the river’s huge alluvial fan on the western side of the valley.”<sup>2</sup> Sand carried by the wind is directed by the Sangre de Cristo Mountains north and funneled into a naturally occurring sand trap—an alcove in the mountain

evaluation and institutional management      **Perspectives in Civil Engineering** Jeffrey S. Russell, 2003-01-01 This report contains 27 papers that serve as a testament to the state of the art of civil engineering at the outset of the 21st century as well as to commemorate the ASCE's Sesquicentennial. Written by the leading practitioners, educators, and researchers of civil engineering, each of these peer-reviewed papers explores a particular aspect of civil engineering knowledge and practice. Each paper explores the development of a particular civil engineering specialty, including milestones and future barriers, constraints, and opportunities. The papers celebrate the history, heritage, and accomplishments of the profession in all facets of practice, including construction, facilities, special structures, engineering mechanics, surveying, and mapping, irrigation, and water quality, forensics, computing, materials, geotechnical engineering, hydraulic engineering, and transportation engineering. While each paper is unique, collectively they provide a snapshot of the profession while offering thoughtful predictions of likely developments in the years to come. Together, the papers illuminate the mounting complexity facing civil engineering, stemming from rapid growth in scientific knowledge, technological development, and human populations, especially in the last 50 years. An overarching theme is the need for systems-level approaches and consideration from undergraduate education through advanced engineering materials, processes, technologies, and design methods and tools. These papers speak to the need for civil engineers of all specialties to recognize and embrace the growing interconnectedness of the global infrastructure economy, society, and the need to work for more sustainable, life-cycle-oriented solutions. While embracing the past and the present, the papers collected here clearly have an eye on the future needs of ASCE and the civil engineering profession.

*Cultivating Capstones* Caroline J. Ketcham, Anthony G. Weaver, Jessie L. Moore, 2023-07-03 Capstones have been a part of higher education curriculum for over two centuries with the goal of integrating student learning to cap off their undergraduate experience. In practice, capstones are most often delivered as a course or include a significant project that addresses a problem or contributes new knowledge. This edited collection draws on multi-year, multi-institutional, and mixed-methods studies to inform the development of best practices for cultivating capstones at a variety of higher education institutions. The book is divided into three parts. Part One offers typographies of capstones illustrating the diversity of experiences included in this high-impact practice while also identifying essential characteristics that contribute to high-quality culminating experiences for students. Part Two shares specific culminating experiences with examples from multiple institutions and strategies for adapting them for readers' own campus contexts. Part Three offers research-informed strategies for professional development to support implementation of high-quality student learning experiences across a variety of campus contexts. *Cultivating Capstones* is an essential resource for faculty who teach or direct disciplinary or interdisciplinary capstone experiences as well as for faculty developers and administrators seeking ways to offer high-quality, high-impact learning experiences for diverse student populations.
