This paper will review a quantitative study comparing the outcomes of physicians that use sterile versus nonsterile gloves during simple soft tissue lacerations repairs in the Emergency Room. It will address the protection of human participants, their risks/benefits, and a review of the study's data collection, data analysis, and problem statement along with an interpretation of its findings. Article

The article is from 2004, and was published in the Annals of Emergency Medicine. It's entitled "Sterile Versus Nonsterile Gloves for Repair of Uncomplicated Lacerations in the Emergency Department: A Randomized Controlled Trial". Protection of Human Participants

A random sampling of patients were taken from populations that presented to multi-center emergency rooms in the Toronto area, with simple soft tissue lacerations that required suture repair. Of the 1,100 people approached, 902 gave voluntary consent to participate in the study. Of those, 86 were excluded for a final total of 816. There were 245 patients who refused to participate, with 40% being children (the study enrolled any patient over the age of one). There was suggestion that the large amount of children who "refused" participation was related to "parental anxiety of entering their child into the study" (Perelman et al., 2004, p. 363). Specific physical, psychological, social or economic risks to patients were not addressed in this article, but a patient information sheet was given to participants before they signed the consent. The handout provided background information on wound management, infection, and the rationale for the study. There were no immediate or direct benefits for patients to be involved in this study. The protocol, patient consent form, and all other related information during this trial were reviewed and approved by the ethic and review boards of all facilities involved. Data Collection

Patients that arrived to one of three large community ER's in the Toronto area, with a wound that was viewed to meet criteria, were provided written information on the rationale of the study and asked to participate. Inclusion criteria were addressed by a physician or resident that included assessing for complexity of laceration, location on the body, and if it had occurred within 3 hours from patient's arrival. A signed a consent was obtained and data was collected through completion of a checklist noting the patient's age, sex, site of laceration, type of injury, time of injury, time of injury from the time of repair, and technique of repair. The patient was given a self-addressed, pre-stamped envelope that was to be completed by the physician who took the sutures out.

This physician filled out an explicit questionnaire using specific guidelines on wound assessment (pus, erythema, fever,) their clinical impressions (infection vs. no infection), and their management plan (topical/oral/IV antibiotic use, or need for referral to wound specialist). The follow up physician was unaware of which gloves were used in initial repair of the wound. The returned questionnaires where coded to collate with the initial assessment forms. There are several independent and dependent variables in this study. They include: not being able to run an equivalency trial related to the large sample size...

railway track design arema - Apr 11 2023

web chapter railway track design basic considerations and guidelines to be used in the establishment of railway horizontal and vertical alignments the route upon which a train travels and the track is constructed is defined as an

ppt geometric design of track abhinav dhayal academia edu - Apr 30 2022

web geometric design of track abhinav dhayal necessity for geometric design to ensure the smooth and safe running of trains to achieve maximum speeds to carry heavy axle loads to avoid accidents and derailment due to a defective permanent way to ensure that the tracks require least maintenance for good aesthetics see full pdf

geometric design of railway track byju s exam prep - Jul 02 2022

web jun 23 2023 the geometric design of railway tracks plays a crucial role in ensuring the efficient and safe movement of trains it encompasses various factors including alignment gradients curves super elevation and transitions

track geometry wikipedia - Jul 14 2023

web track geometry is concerned with the properties and relations of points lines curves and surfaces in the three dimensional positioning of railroad track the term is also applied to measurements used in design construction and maintenance of track

introduction to railway track design springer - Aug 15 2023

web introduction to railway track design abstract in railway tracks the stresses and deformations induced by their own

weight are negligible if compared to those deriving from thermal and vehicle loads

the geometric design of railway track with numerical example - Jun 13 2023

web the geometric design of railway track is to calculate superelevation gradient etc of the railway for the smooth running of the engine on the rail gradient any departure of the track from the level is known as grade or gradient gradients are provided to negotiate the rise or fall in the level of the railing track types of gradient

configuration of the geometric state of railway tracks in the - May 12 2023

web mar 4 2023 the geometry of the railway track is the basis for the design construction modernisation revitalisation and maintenance of the railway track chen et al in 21 state that the accurate measurement of railway track geometry is a task of fundamental importance to ensure the track quality in both the construction phase and the regular

design and manufacture of a scaled railway track with - Aug 03 2022

web may 23 2022 this article presents the process of design manufacture and installation of a scaled railroad track that allows to introduce track irregularities to its reference geometry such as gauge variation

comparative study of geometric design regulations of railways - Jan 28 2022

web 2 geometric design of railway tracks railway track geometry significantly affects vehicle behavior here the most common factors used for geometrical design are discussed as follows 2 1 track

geometric design of railway track l 3 railway and airport - Dec 27 2021
