1) Write an algorithm that finds the largest number in a list (an array) of n numbers.

Input: positive integer n , list of numbers S indexed from 1 to n

Output: the maximum element in the list S

```
number findMax(int n, const keytype S[ ]) {  
    index i;  
    number max = S[1];  
    for(i = 2; i <= n; i++)  
        if(S[i] > max)  
            max = S[i];  
    return max;  
}
```

2) Write an algorithm that finds the m smallest numbers in a list of n numbers.

Input: positive integer n , list of numbers S indexed from 1 to n , empty list of numbers $Small$ indexed from 1 to m .

Output: the list $Small$ with the smallest m numbers in it.

```
void find_m_Smallest(int n, const keytype S[ ], keytype Small[]) {  
    index i, j, k;  
    Small[1] = S[1];  
    for(i = 2; i <= n; i++) {  
        if(j <= m)  
            find index j where S[i] needs to be inserted in Small, such that\  
                Small stays sorted in non-decreasing order;  
        for(k = m-1; k >= j; k--)  
            Small[k+1] = Small[k]; //shift right  
        Small[j] = S[i]; //insert S[i]  
    }  
}

A Mathematical Theory of Design: Foundations, Algorithms and Applications D. Braha, O. Maimon, 2013-04-17

Formal Design Theory PDT is a mathematical theory of design The main goal of PDT is to develop a domain independent core model of the design process The book focuses the reader's attention on the process by which ideas originate and are developed into workable products In developing PDT we have been striving toward what has been expressed by the distinguished scholar Simon 1969 that the science of design is possible and some day we will be able to talk in terms of well established theories and practices The book is divided into five interrelated parts The conceptual approach is presented first Part I followed by the theoretical foundations of PDT Part II and from which the algorithmic and pragmatic implications are deduced Part III Finally detailed case studies illustrate the theory and the methods of the design process Part IV and additional practical considerations are evaluated Part V The generic nature of the concepts theory and methods are validated by examples from a variety of disciplines FDT explores issues such as algebraic representation of design artifacts idealized design process cycle and computational analysis and measurement of design process complexity and quality FDT's axioms convey the assumptions of the theory about the nature of artifacts and potential modifications of the artifacts in achieving desired goals or functionality By being able to state these axioms explicitly it is possible to derive theorems and corollaries as well as to develop specific analytical and constructive methodologies

Exercises in Numerical Linear Algebra and Matrix Factorizations Tom Lyche,Georg Muntingh,Øyvind Ryan,2020-11-02 To put the world of linear algebra to advanced use it is not enough to merely understand the theory there is a significant gap between the theory of linear algebra and its myriad expressions in nearly every computational domain To bridge this gap it is essential to process the theory by solving many exercises thus obtaining a firmer grasp of its diverse applications Similarly from a theoretical perspective diving into the literature on advanced linear algebra often reveals more and more topics that are deferred to exercises instead of being treated in the main text As exercises grow more complex and numerous it becomes increasingly important to provide supporting material and guidelines on how to solve them supporting students learning process This book provides precisely this type of supporting material for the textbook Numerical Linear Algebra and Matrix Factorizations published as Vol 22 of Springer s Texts in Computational Science and Engineering series Instead of omitting details or merely providing rough outlines this book offers detailed proofs and connects the solutions to the corresponding results in the textbook For the algorithmic exercises the utmost level of detail is provided in the form of MATLAB implementations Both the textbook and solutions are self contained This book and the textbook are of similar length demonstrating that solutions should not be considered a minor aspect when learning at advanced levels

An Improved Foundation for the Investigation and Treatment of Gastric Dysrhythmia [PhD Thesis] Gregory O'Grady,2012 Gastric motility disorders remain a complex clinical challenge and inflict a substantial burden of cost and suffering on society Gastric contractions are coordinated by an underlying electrical activity and gastric dysrhythmias are implicated in the pathophysiology of several motility disorders However the significance of dysrhythmias remains uncertain and there are few elective therapies because current tools to investigate dysrhythmias have low reliability owing to their lack of spatial resolution This thesis aimed to develop an improved foundation for the investigation and management of gastric dysrhythmia by advancing and translating high resolution HR multi electrode spatiotemporal mapping The research is a cross disciplinary program of bioengineering and basic and clinical electrophysiology A range of HR mapping devices are first developed and validated for intra operative gastric mapping including at open and laparoscopic surgery Automated signal processing tools are next validated for the efficient reliable marking grouping and mapping of slow wave events and these tools are integrated into an intuitive software platform These methodological advances are then applied in a series of experimental studies The origin and propagation of porcine gastric slow wave activity is defined followed by clinical translation with the first spatiotemporal analysis of normal human gastric slow wave propagation The methods are then applied to define new patterns and mechanisms of gastric

dysrhythmia initially in a porcine model including the first demonstration of how rapid high amplitude circumferential propagation emerges during dysrhythmias The first clinical study applying HR electrical mapping is then presented performed on a cohort of patients with diabetic and idiopathic gastroparesis revealing new patterns of human dysrhythmia A new classification scheme for abnormalities of human gastric slow wave initiation and conduction is proposed Finally the evidence for high frequency gastric electrical stimulation is reviewed prior to the presentation of a new entrainment mapping method for better assessing gastric pacing protocols In total this work constitutes a coordinated series of advances that offer a strengthened foundation for investigating and managing gastric electrical abnormalities It is hoped that these new methods and findings will translate into future clinical advances to improve the diagnosis and treatment of these complex patient populations
