- Know all vocab (on Quizlet)
- Know/describe the different parts of an atom
- Describe the atomic model timeline
 - Scientists, theories, discoveries, models, experiments
- Know what quarks are
- Know what happens to a neutral atom when the number of protons, neutrons, or electrons change
- Be able to describe the three types of nuclear decay

Different Parts of an Atom:

- **Electrons** are very small particles inside an atom with one negative charge (-1). The closer electrons are to the nucleus, less energy.
- The **nucleus** is a small area in the center of the atom where most of its mass and positive charge is concentrated
- A **proton** is an atomic particle that has one positive charge (+1)
- A **neutron** is a neutral particle that exists in the nucleus of an atom
- An **electron cloud** is an area around an atomic nucleus where an electron is most likely to be located
- A **quark** is the smallest particle in an atom, and it is what protons and neutrons are made of

The Atomic Model Timeline:

DEMOCRITUS:

- He was a philosopher who challenged the popular idea of matter.
- His atomic theories were that atoms are small solid objects that cannot be divided, created, or destroyed. Also, that atoms are constantly moving in empty space, and that different types of matter are made of different types of atoms. His last theory is that the properties of the atoms determine the properties of matter.

DALTON:

- In the late 1700s, John Dalton revisited the idea of atoms.
- His atomic theories were that all matter is made of atoms that can't be divided, created, or destroyed. Also, that during a chemical reaction, atoms of one element can't be converted into atoms of another element. The third theory is that atoms of one element are identical to each other but different from atoms of another element. The last theory is that atoms combine in specific ratios.

Metadecisions John P. van Gigch,2012-12-06 Metadecisions Rehabilitating Epistemology constitutes an epistemological inquiry about the foundations of knowledge of a scientific discipline This text warns contemporary scientific disciplines that neglecting epistemological issues threatens the viability of their pronouncements and designs It shows that the processes by which complex artefacts are created require a pluralistic approach to artefact design It argues that viable

solutions to fundamental problems in each discipline require cooperation creativity and respect for contributions from all walks of life all levels of logic and all standards of rigor be they in the natural sciences the social sciences engineering sciences management the law or political sciences Several true cases obtained from different walks of life are used to illustrate logic levels in problems and how the application of the process of modeling metamodeling helps to conceptualize problem dysfunctions and to convert decisions into metadecisions Ten cases spanning subjects like Doctor Assisted Suicides DASs Advising Women on The Risks of Mammograms a Deregulation Crusade The Crash of TWA Flight 800 The Control of The World Wide Web The Creation of the US Department of Homeland Security among others are used to illustrate the application of the metasytem framework to increase knowledge and meaning of fundamental problems The design of any human activity requires the intervention of several inquiring systems where the manager the engineer the scientist the lawyer the epistemologist the ethicist and even the artist contribute to shape how problems in the real world are formulated how decisions metadecisions to solve problems are taken and finally how actions are implemented

Instructional Models in Physical Education Michael Metzler,2017-06-30 Ensures that physical educators are fully armed with a comprehensive plan for incorporating instructional models in their teaching Instructional Models for Physical Education has two primary goals for its readers The first is to familiarize them with the notion of model based instruction for physical education including the components and dimensions that determine a model s pattern of teaching and how to select the most effective model for student learning in a particular unit The second goal is to describe each of the instructional models in such a way to give readers enough information to use any of the models with confidence and good results The book includes everything readers will need for planning implementing and assessing when teaching with instructional models It will help readers incorporate research based practices in their lessons adapt activities to include students of varying abilities and teach to standards Models tied to NASPE standards The author has revised the third edition to show how using the instructional models can help teachers meet specific NASPE standards The book demonstrates the connection of NASPE standards with the models and clarifies that connection for students In addition a

table in each of the model chapters shows explicitly how the model aligns with NASPE standards *Research in Education*, 1972 *E.A. Burtt, Historian and Philosopher* D. Villemaire, 2002-02-28 Here is a much needed study of the American historian and philosopher E A Burtt H Floris Cohen author of *The Scientific Revolution A Historiography* has described Burtt as an individual thinker beyond philosophical or historical currents or fashion Burtt's book *The Metaphysical Foundations of Modern Physical Science* is something of a puzzle within the context of twentieth century intellectual history especially American intellectual history Burtt's pioneering study of the scientific revolution has proved to prophetic in its rejection of both scientism and positivism Published in 1924 Burtt's book continues to be read in educated circles and remains both the rose and the thorn on university reading lists raising skeptical questions about science methods and science knowledge just as it did seventy five years ago This book examines Burtt's public academic and personal life From his politics of conscience after World War I on through the Cold War Burtt is shown to be a man of unparalleled integrity whose relentless search for philosophic understanding drove his more quixotic philosophical quests and steered his personal life including its tragic dimension toward simple virtue The many who have been affected by *The Metaphysical Foundations* will be especially interested in this new perspective on the life and thought of its author Those who have not read Burtt's books might be inspired to study this unusual American thinker **Teachers' Handbook to Accompany Foundations of Chemistry** Arthur Alphonzo Blanchard, 1915
