Interface between Literature and Science Victoria Carpenter,2015-05-13 The boundaries of science and literature are permeable they are continuously crossed and illuminated by a variety of narrative forms and their interpretations Changes in our perception of the world are informed in equal measure by scientific and humanistic disciplines This volume treats both literary and scientific texts as products of the human mind therefore abiding by all the rules it creates scientific and humanistic alike The volume does not propose to replace all literary or discourse analysis with a cross disciplinary science based approach but rather uses this theoretical stance when more conventional means fail to explain or even explore the intricacies of a text It argues that scientific discourse can also be analysed through the prism of literary theories since all texts are governed in varying measure by the unity of contexts that characterize their nature the process of their creation and their place in the cognitive realm of humanity This approach will allow the nature and limitations of scientific research to be questioned while opening up more venues to explore scientific creativity that crosses the subject boundaries of science and humanities Latin American literature offers many examples of the interconnection between literary and scientific discourse Notwithstanding the often explored relationship between Jorge Luis Borges s literary themes and contemporary scientific discoveries a more general question should be asked is the influence of scientific thought a privilege of the select few or is it indeed an all pervading experience in Latin American literary narrative from late modernism to present day This book explores the texts that overtly incorporate scientific content or are structured in such a way that immediately reminds the reader of a scientific phenomenon it will also examine the texts that are presented in such a way that a conventional literary analysis does not help penetrate the many narrative layers that the text comprises The volume offers cross disciplinary readings of such authors as Jorge Luis Borges Gabriel Garc a M rquez

Cultivating Knowledge Scott Tunison,2016-07-27 Over the last decade or two there has been increasing consensus that academic research if used judiciously to guide practice improves both educational policy and pedagogy ultimately leading to better outcomes for students Yet despite this potential there remains a deep ravine between the body of knowledge built through research especially at the intersection between specific interventions and improved student achievement and the actions taken by policy makers administrators and classroom teachers in their regular practice There are myriad reasons for this research practice divide Among them is that it is difficult for district based people to access primary research Furthermore multiple waves of well intentioned research based but largely unsuccessful school reform efforts have resulted in skepticism among practitioners about research and at the same time damaged researchers credibility in the field This book is divided into three broad areas First it develops an engaging analysis of the root causes for the research practice gap in education Second it describes the framework developed and used in a public school district by the author to address the root causes and provides evidence of its efficacy to facilitate greater incorporation of research into school and district level practice Through a process the author calls Knowledge Cultivation the framework uses weekly research summaries for district leaders that are relevant to their real time issues along with suggestions about ways in which the research might be useful The final section of the book includes the actual research summaries used by the author over a five year period
