Handbook on Quality and Standardisation in E-Learning Ulf-Daniel Ehlers, Jan Martin Pawlowski, 2006-10-11. Quality and standardisation in e-learning have become crucial success factors for organisations in learning, education and training. E-Learning has changed from an early adopter stage to an integrated part of learning scenarios, leading to major changes in educational organisations towards quality orientation. For building a knowledge society, it is critically important to thoroughly understand quality and standards in e-learning. The handbook provides a cross-national perspective on these issues and draws a clear picture of the situation in quality development and standardisation. It covers topics of a rather foundational nature in quality and standardisation research, as well as descriptions of quality approaches, instruments, standards, experiences and best practices. The Handbook is directed to learners, professionals, researchers and policy makers, people creating the next generation of learning.

New Industry 4.0 Advances in Industrial IoT and Visual Computing for Manufacturing Processes Luis Norberto López de Lacalle, Jorge Posada, 2020-03-18. Modern factories are experiencing rapid digital transformation supported by emerging technologies such as the Industrial Internet of Things (IIoT), industrial big data and cloud technologies, deep learning and deep analytics, AI, intelligent robotics, cyber-physical systems and digital twins, complemented by visual computing, including new forms of artificial vision with machine learning, novel HMI simulation and visualization. This is evident in the global trend of Industry 4.0. The impact of these technologies is clear in the context of high-performance manufacturing. Important improvements can be achieved in productivity, systems reliability, quality verification, etc. Manufacturing processes based on advanced mechanical principles are enhanced by big data analytics on industrial sensor data. In current machine

tools and systems complex sensors gather useful data which is captured stored and processed with edge fog or cloud computing These processes improve with digital monitoring visual data analytics AI and computer vision to achieve a more productive and reliable smart factory New value chains are also emerging from these technological changes This book addresses these topics including contributions deployed in production as well as general aspects of Industry 4 0
