- **Ethics:** a set of principles that guide decision-making.
- **Qualitative:** data that uses numbers (not a number) descriptions.
- **Quantitative:** data that can be counted or measured.

CELLULAR STRUCTURES:

- **Nucleus:** contains genetic material (DNA) and chromosomes.
- **Mitochondria:** respiration occurs here, makes energy, "powerhouse" of the cell.
- **Cell Membrane:** the "door" of the cell, it encloses the entire cell and molecules pass through it.
- **Ribosome:** the organelle that makes protein for the cell.
- **Chloroplast:** organelle found in plants that captures the energy from sunlight and converts it into chemical energy.
- **Endoplasmic Reticulum:** a cell structure that forms a mass of passageways in which proteins and other materials are carried from one part of the cell to another.
- **Golgi Bodies:** a complex of vesicles and folded membranes within the cytoplasm of most eukaryotic cells, involved in secretion and intracellular transport (processes proteins).

REMEMBER!

Prokaryotes contain a cell without chloroplasts. Animal cells do not!

SCIENTIFIC INQUIRY:

- Observations are made by gathering information about events or processes. An inference is a logical interpretation based on prior knowledge or experience.
- A hypothesis is a proposed scientific explanation for a set of observations.
- The variable that is deliberately changed is called the **manipulated variable**. The variable that is observed and changes in response to the manipulated variable is called the **responding variable**.
- A control group is not exposed to the independent variable so that it can be used as comparison to the experimental data.

TYPES OF CELLS:

- **Prokaryotes:** simple cells that do not have a nucleus.

 - Adenine, Thymine, Cytosine and Guanine
 - Base pairing rule -
 - A \longleftrightarrow T
 - G \longleftrightarrow C

EVOLUTION &

NATURAL SELECTION

- **Natural Selection:** Organisms with favorable traits during their lifetime will breed and pass on their traits more than those who do not have them.
- **Evolution:** How organisms change over many generations.
- **MUTATION** happens during a single generation (just a gain/loss of a big molecule like weight lifting).

based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Molecular Genetics and Emerging Therapies for Epithelial Ovarian Cancer: Basic Research and Clinical Perspectives
Stergios Boussios, Eleftherios Pierre Samartzis, Nicholas Pavlidis, J. Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer EOC is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230 000 women are diagnosed annually whereas 150 000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More than one fifth of EOC have been related to hereditary conditions Considerable efforts have been made to implement screening of the general population to diagnose EOC early nevertheless this has been ineffective and there is no approved strategy Nowadays new approaches for early diagnosis and prevention based on molecular genomics are in development Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse The incorporation of next generation sequencing NGS into clinical practice remains challenging for two reasons Firstly the EOC risk is not clear for some of the included genes and secondly the variant of uncertain significance rates increase as more genes are analyzed Finally beyond germline pathogenic variants somatic mutations may also affect therapeutic choices and as such upfront tumor sequencing may be equally important to NGS particularly as we continue to challenge treatment paradigms in the first line management of EOC
