

3.2 Reading topographic maps

- Vertical view of a place (like the area south of King William's Town illustrated on the following page).
- Three types of symbols are evident – point, line and area symbols.
- Areas can be regular – such as rectangles (for instance, cultivated fields), triangles or circles. Or they can be irregular (for instance, dams have varying shapes).

assessment in Geographical Education the chosen subject for this book Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students teachers parents and policymakers To be effective assessment needs to be valid reliable and fair Validity is about ensuring that we assess what we claim we are assessing Reliability is about measuring performance and understanding in a consistent way Without validity and reliability assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning While there is a substantial literature on evidence based assessment in secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia USA South Korea Germany Switzerland and Singapore What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student s knowledge and skills

Del Casino Jr., Natalie Marie Gulsrud, Sarah Barns, 2023-10-18 Artificial intelligence AI is now mediating and in some cases seen to be controlling key urban services and infrastructures thus becoming a prominent feature of the contemporary city As portrayed in recent studies the autonomous city can be understood as a city where urban

artificial intelligences perform tasks and take on roles which have traditionally been the domain of humans At stake in these debates are questions related to the meaning and ongoing role of intelligence for both humans and machines While autonomous cars transport people service robots run shops drones deliver goods and city brains govern entire cities humans are redefining the meaning of what smart means in the city and what role the human being may play in future urban spaces With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore Complete Year, Grade 3
