parts of the history of life in the context of the research that unpicks it This means that the history is widely distributed across the text This concise textbook assumes that the reader has a fair amount of biological knowledge and gives equal weight to all the major themes of evolution the fossil record phylogenetics evodevo and speciation Principles of Evolution will therefore be an interesting and thought provoking read for honors level undergraduates and graduates working in the biological sciences

Mechanisms of Life History Evolution Thomas Flatt, Andreas Heyland, 2011-05-12 This interdisciplinary volume unites evolutionary and molecular biologists from various fields life history theory molecular biology developmental biology aging phenotypic plasticity social behaviour and endocrinology who use studies of molecular mechanisms to solve fundamental questions in life history evolution in a variety of organisms

Darwinian Evolution of Molecules Hiromoto Nakazawa, 2018-06-09 On the basis of thermodynamic considerations and the Earth's historical processes this book argues the physical inevitability of life's generation and evolution i.e. Why did life generate Why does life evolve Following an introduction to the problem the hypothesis Darwinian Evolution of Molecules is proposed which explains how when and where life was instigated through successive chemical reactions and the survival of selected molecules The individual processes described are all scientifically reasonable being verifiable by experiment The hypothesis is supported by extensive reference to the scientific literature published in academic journals including some experimental reports from the author's own research group The readers of this book will learn that the decreasing temperature of the early Earth led to a reduction in its entropy inducing the Earth's materials to order which entailed ordering of the light elements as organic molecules with subsequent further ordering i.e. evolution to systems that can be considered alive i.e. life Researchers and students as well as the non academic audience interested in the interdisciplinary problem of the origin of life will find suggestions and possible approaches to the scientific and conceptual problems they may be facing
