

Example 1 Find the absolute values of fractions.

Solve. Show your work.

- a) Find the absolute values of
- $-\frac{11}{12}$
- and
- $\frac{26}{15}$
- .

Solution

$$\left| -\frac{11}{12} \right| = \frac{11}{12} \text{ and } \left| \frac{26}{15} \right| = \frac{26}{15}.$$

- b) Using a number line, show how far
- $-\frac{11}{12}$
- and
- $\frac{26}{15}$
- are from 0. Which number is closer to 0?

Solution

$-\frac{11}{12}$ is $\frac{11}{12}$ units to the left of 0. $\frac{26}{15}$ is $\frac{26}{15}$ units to the right of 0.

Because the distance $\frac{11}{12} < 1$ unit and $\frac{26}{15} > 1$ unit, $-\frac{11}{12}$ is closer to 0.

Guided Practice

Solve.

- Find the absolute values of $3\frac{2}{7}$ and $-\frac{18}{5}$.
- Graph the two numbers on a number line and indicate their distances from 0. Which number is farther from 0?

Express Integers and Fractions in $\frac{m}{n}$ Form.

A **rational number** is a number which can be written as $\frac{m}{n}$ where m and n are integers with $n \neq 0$. The definition of rational numbers comes from the concept of fractions.

Examples: $1\frac{1}{2} = \frac{3}{2}$. So, $1\frac{1}{2}$ is a rational number.
 $3 = \frac{3}{1}$. So, 3 is a rational number.

Think Math

You cannot write a rational number $\frac{m}{n}$ with $n = 0$. Why?

To express 0 in the form $\frac{m}{n}$, you can write 0 as $\frac{0}{1}$.

Willingham,Nancy S. Cole,2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test

performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience
