

Before connecting to the mains supply

... there are a few points which are important for correct operation of the projector:

1. The type of supply current, voltage and frequency of your mains supply must match the settings on your projector. If your supply voltage does not correspond to the projector setting, remove the back (unscrew the screws A), pull off the plug B towards the left and attach it to the appropriate terminal (see illustration). Some supply systems are liable to carry temporary overvoltages which can lead to premature projection lamp failure. Where this arises, it is best to adjust the projector to the next higher voltage setting (for instance 230 volts instead of 220 volts). This also extends the burning life of the lamp while slightly reducing the light output.

The frequency setting can be changed only on special versions of the projector. To do this, pull off the blue plug C and attach to the appropriate terminal. Move the lever D at the top right so that the required frequency value appears horizontal.

2. The transport lock. For safety in shipping, the motor has two retaining screws (E) to secure it rigidly in position. These screws must be removed before you first connect the projector to the mains supply – unless your photo dealer has already done this for you (see illustration).
