Systems of Inequalities Word Problems

- 1 Peter's pet store never has more than a combined total of 20 rabbits and dogs. The store also never has more than 8 rabbits. How many of each type of pet do they have at the pet store? Use the graph to write the system of linear inequalities. Identify and intercept the solution.

- 2 Jason is buying wings and hot dogs for a party. One package of wings cost \$7. Hot dogs cost \$5 per package. He must spend no more than \$40.

a Write an inequality to represent the cost of Jason's food for the party.

b Jason will be buying at least 5 packages of hot dogs. Write an inequality to represent this solution.

c Graph both inequalities. Find two points to determine the number of wings and hot dogs he should buy.

[Inequalities from Complex Analysis](#) John P. D'Angelo, 2002-12-31 Inequalities from Complex Analysis is a careful friendly exposition of inequalities and positivity conditions for various mathematical objects arising in complex analysis The author begins by defining the complex number field and then discusses enough mathematical analysis to reach recently published research on positivity conditions for functions of several complex variables The development culminates in complete proofs of a stabilization theorem relating two natural positivity conditions for real valued polynomials of several complex variables The reader will also encounter the Bergman kernel function Fourier series Hermitian linear algebra the spectral theorem for compact Hermitian operators plurisubharmonic functions and some delightful inequalities Numerous examples exercises and discussions of geometric reasoning appear along the way Undergraduate mathematics majors who have seen elementary real analysis can easily read the first five chapters of this book and second year graduate students in mathematics can read the entire text Some physicists and engineers may also find the topics and discussions useful The inequalities and positivity conditions herein form the foundation for a small but beautiful part of complex analysis [Online Optimization of Large Scale Systems](#) Martin Grötschel, Sven O. Krumke, Joerg Rambau, 2013-03-14 In its thousands of years of history mathematics has made an extraordinary career It started from rules for bookkeeping and computation of areas to become the language of science Its potential for decision support was fully recognized in the twentieth century only vitally aided by the evolution of computing and communication technology Mathematical optimization in particular has developed into a powerful machinery to help planners Whether costs are to be reduced profits to be maximized or scarce resources to be used wisely optimization methods are available to guide decision making Optimization is particularly strong if precise models of real phenomena and data of high quality are at hand often yielding reliable automated control and decision procedures But what if the models are soft and not all data are around Can mathematics help as well This book addresses such issues e g problems of the following type An elevator cannot know all transportation requests in advance In which order should it serve the passengers Wing profiles of aircrafts influence the fuel consumption Is it possible to continuously adapt the shape of a wing during the flight under rapidly changing conditions Robots are designed to accomplish specific tasks as efficiently as possible But what if a robot navigates in an unknown environment Energy demand changes quickly and is not easily predictable over time Some
