Existing in the Information Dimension Daniel Boyd,2024-09-09 This book presents new insights into the nature of the
human mind as a product of the brain It does so by discussing how biological and technological information systems differ
from their counterparts with physical functions presenting Emergent Information Theory as a solution to the mind body
problem and overarching framework for all biological and technological information systems Emergent Information Theory is
a new theoretical approach to the specific type of information and emergence exploited by biological neural networks and
digital systems One of the conclusions of this theory is that these entities and processes are non physical and exist in an
information dimension connected to but distinct from the three dimensions of physical space It is in this information
dimension that our minds exist making it ultimately more our home as sentient beings than the physical realm inhabited by
our bodies This book presents existing scientific and philosophical evidence that leads to this conclusion followed by
application of the theory to biological and technological information systems The author concludes with a call to action for
further research This fascinating text will be of interest to any researcher of consciousness the mind body problem or AI as
