Tonn, 2021-05-16 This book considers the philosophical underpinnings policy foundations institutional innovations and deep cultural changes needed to ensure that humanity has the best chance of surviving and flourishing into the very distant future Anticipation of threats to the sustainability of human civilization needs to encompass time periods that span not just decades but millennia All existential risks need to be jointly assessed as opposed to addressing risks such as climate change and pandemics separately Exploring the potential events that are likely to cause the biggest risks as well as asking why we should even desire to thrive into the distant future this work looks at the biggest picture possible in order to argue that futures oriented decision making ought to be a permanent aspect of human society and futures oriented policy making must take precedent over the day to day policy making of current generations in times of great peril The book concludes with a discourse on the truly fundamental bottom up changes needed in our personal psychologies and culture to support these top down recommendations This book is of great interest to philosophers policy analysts political scientists economists psychologists planners and theologians **Frankenstein Urbanism** Federico Cugurullo, 2021-05-16 This book tells the story of visionary urban experiments shedding light on the theories that preceded their development and on the monsters that followed and might be the end of our cities The narrative is threefold and delves first into the eco city second the smart city and third the autonomous city intended as a place where existing smart technologies are evolving into artificial intelligences that are taking the management of the city out of the hands of humans The book empirically explores Masdar City in Abu Dhabi and Hong Kong to provide a critical analysis of eco and smart city experiments and their sustainability and it draws on numerous real life examples to illustrate the rise of urban artificial intelligences across different geographical spaces and scales Theoretically the book traverses philosophy urban studies and planning theory to explain the passage from eco and smart cities to the autonomous city and to reflect on the meaning and purpose of cities in a time when human and non biological intelligences are irreversibly colliding in the built environment Iconoclastic and prophetic Frankenstein Urbanism is both an examination of the evolution of urban experimentation through the lens of Mary Shelley's Frankenstein and a warning about an urbanism whose product resembles Frankenstein's monster a fragmented entity which escapes human control and human understanding Academics students and practitioners will find in this book the knowledge that is necessary to comprehend and engage with the many urban experiments that are now alive ready to leave the laboratory and enter our cities *Frankenstein and Its Classics* Jesse Weiner, Benjamin Eldon
