Perley,2021-07-12 The recent COVID 19 induced slamming of millions of information workers into the home workplace has made clear that the planning and management foundations for such a mass migration are anything but solid

Now the IT industry is scrambling to offer products which do not treat the remote worker as a third class citizen However there is another problem namely the lack of a coherent theory and documented practice about what wide scale workplace decentralization will really do for the individual the organization the local community and ultimately the planet Indeed the home workplace can and ultimately will serve as the gateway to a whole new focus on the triplex of environmental energy and economic issues It may even become the portal to a more peaceful and stable world This book is not a research work but rather an opinion piece based on personal experience working as an IT program manager executive and consultant in various large enterprises while working from home for a significant percentage of the time Among other things it reflects a very strong belief that home workplace technology architects were altogether too quick to abandon the Public Switched Telephone Network PSTN as a core component of that architecture The book will equip the reader with a balance of strategic and tactical perspectives and tools which should assist in designing prototyping and rolling out a home workplace environment which is best suited to the needs of their organization and which will also contribute to the building of a worldwide electronic commonwealth
