apparent that these problems usually involve feedbacks between atmospheric ecological and hydrological systems as well as human society. It is often the feedbacks between systems that are of greatest interest because they may produce unanticipated responses. That is why coupling of different compartments of the Earth system has emerged as a general challenge to the modelling community. This book considers an array of state of the art coupling and modelling concepts. First the relevant Earth system cycles are presented followed by a discussion on scale issues and multiple equilibria. Inter and intra compartmental coupling is addressed along with a debate on non linearities and questions of parameterisation. Several applications are presented where a focus is on cases where the hydrological cycle plays a central role. Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1972

Cash Transfers for Poverty Reduction Francisco V. Ayala, David Lawson, 2023-12-06 Over the past 20 years more than 100 countries have implemented social safety nets targeted at the poorest and most vulnerable. Impact evaluations have shown the effectiveness of these programmes and policymakers have explored different methods of delivery including cash transfers. *Cash Transfers for Poverty Reduction* offers the first systematic discussion of the design and implementation of poverty reduction schemes and cash transfer programmes in particular. The authors also draw on their own practical experience and present global case studies to show the effects that these decisions have on operations and outcomes. Featuring end of chapter questions and answers to help test your knowledge, this book offers an operational guide for key stakeholders: officials and students in understanding the design, implementation and monitoring and evaluation of cash transfer programmes.

Python in Neuroscience Eilif Muller, James A. Bednar, Markus Diesmann, Marc-Oliver Gewaltig, Michael Hines, Andrew P. Davison, 2015-07-23 Python is rapidly becoming the de facto standard language for systems integration. Python has a large user and developer base external to the neuroscience community and a vast module library that facilitates rapid and maintainable development of complex and intricate systems. In this Research Topic we highlight recent efforts to develop Python modules for the domain of neuroscience software and neuroinformatics: simulators and simulator interfaces, data collection and analysis, sharing, re-use, storage and databasing of models and data, stimulus generation, parameter search and optimization, visualization, VLSI hardware interfacing. Moreover, we seek to provide a representative overview of existing mature Python modules for neuroscience and neuroinformatics to demonstrate a critical mass and show that Python is an appropriate choice of interpreter interface for future neuroscience software development.
