Geographic Information Systems and Science Jorge Rocha, Patricia Abrantes, 2019. Geographic information science (GISc) has established itself as a collaborative information processing scheme that is increasing in popularity. Yet this interdisciplinary and/or transdisciplinary system is still somewhat misunderstood. This book talks about some of the GISc domains encompassing students, researchers, and common users. Chapters focus on important aspects of GISc, keeping in mind the processing capability of GIS along with the mathematics and formulae involved in getting each solution. The book has one introductory and eight main chapters divided into five sections. The first section is more general and focuses on what GISc is and its relation to GIS and Geography; the second is about location analytics and modeling; the third on remote sensing data analysis; the fourth on big data and augmented reality; and finally, the fifth looks over volunteered geographic information. **CAD and GIS Integration** Hassan A.
