Benfer,Joseph L. Scheffey,2015-08-08 This SpringerBrief offers careful assessments of the appropriateness and effectiveness of currently available methodologies for fire flow It explains the water supply requirements for firefighting including rate of flow the residual pressure required at that flow and the duration that is necessary to control a major fire in a specific structure First reviewing existing fire flow calculation methodologies in the U S and globally the authors determine the new information necessary to validate the existing fire flow calculation methodologies After identifying 19 methods from the U S UK France Germany the Netherlands New England and Canada two types of methods are evaluated those for building planning based on fire and building code requirements and those for on scene fire service use Building planning methods are also examined including an explanation of the range of building variables that determine fire flow A survey form for fire departments is provided to help fire departments identify key predictive features based on construction and building parameters Researchers and professionals in fire engineering will find the recommendations in *Evaluation of Fire Flow Methodologies* valuable *Fair, Geyer, and Okun's, Water and Wastewater Engineering* Nazih K. buildings burned millions of dollars were lost the fire insurance industry faltered and the nature of volunteerism changed radically before municipal authorities took the necessary actions The great fires formed a crucible of learning for firefighters engineers architects underwriters and citizens Veteran firefighter Bruce Hensler shows how the modern American fire service today is a direct result of the lessons of history and a rethinking of the efficacy of volunteerism in fighting fires
