DETAIL A

Item B

Installing the Exciter

⚠
- Ensure that the power supply and network are turned off to prevent electrical shock or damage to equipment.
- Touch your hand to ground to discharge any electrostatic charge before handling the Exciter.

The steps below correspond to the numbers in **Figure 1**.

1. Locate and record the LonWorks identification number onto the facility floor plan indicating the Exciter's position and network wiring path. Use the tear-away sticker on the Exciter's Neuron ID label.

2. Install the supplied door contact or PIR sensor according to the manufacturer's instructions and connect it to the terminal, as shown in the wiring diagrams. Connect the LonWorks Network IN, Network OUT, and Power Supply to the terminal blocks, as shown in the wiring diagrams. If the Exciter is at the end of the network, then terminate the network segment with Item A (105 Ω terminator). Refer to **Detail A**, and insert the terminals into the connector on the Exciter.

Note: If installing keypads or accessory devices, or if using a master/slave configuration, proceed to the relevant sections on the opposite page, and then return to steps 3 and 4.

3. Ensure that the status LED of the Exciter will be visible. Refer to the facility floor plan for location, and using the Exciter L-bracket as a template mark the location of the four mounting holes. Drill the holes.

4. Mount the Exciter.

   L-bracket installation

   A. Install in the four mounting holes:
   4 hollow wall anchors

   B. Attach the Exciter to the L-bracket, using:
   4 No. 10 stainless steel machine screws
   4 stainless steel hex nuts
   4 No. 10 stainless steel flat washers

   C. Attach the assembled Exciter and L-bracket to the previously installed hollow wall anchors, using:
   4 No. 10 wood screws x 1 in. long

   Surface mount installation

   A. Install in the four mounting holes:
   4 hollow wall anchors

   B. Insert into the wall anchors, leaving 3/8 to 10.5 cm) of the shaft exposed:
   4 No. 10 wood screws x 1 in. long

   C. If using surface wire conduit, attach the four supplied bumpers (Item B in **Figure 1**) to the underside of the Exciter.

   D. Align the Exciter with the mounting screws, and while lightly pressing, slide until it is securely in place. Insert the supplied screw caps.

Installation is complete. Proceed to **Final Steps** below.

Installing Keypads

A single keypad may be connected to an Exciter to enable an index to be typed out at the door. The keypad also releases the Exciter's relays, for example, to disengage a magnetic door lock. Hugs uses the Wiegand standard KTP-1600N keypad, which offers individual passwords for each user.

Refer to the Hugs Installation Manual and the manufacturer's instructions. Keypads may be connected to either master or slave Exciter.

Note: The keypad requires a separate 12 VDC power supply.
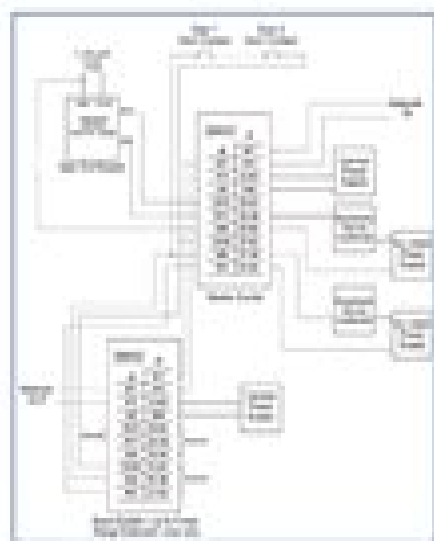

Installing Accessory Devices

Each Exciter has two 30 VDC, 1 Amp, NO or NC relays for controlling accessory devices, such as magnetic door locks and high output alarms.

Refer to the Hugs Installation Manual and the manufacturer's instructions for installation procedures. Devices may be connected to either master or slave Exciter; connect devices to the master Exciter's relays first, then connect additional devices to the slave Exciter, starting with the closest.

Note: Accessory devices require their own power supply.

Master/Slave Installations

Master and slave Exciters are installed and connected to the Lon-Works network in the same way as other Exciters, with the following additions:

- If installing a master/slave group to connect a door through their M/S and ground terminals using 26 AWG wire, as shown in the wiring diagrams.

For slave Exciters using their own I/O numbers, the following is also required, as shown in **Figure 3**:

- The mag lock for divation holds require are wired to the relays on both the master and the slave to ensure that all doors in the vicinity will lock when a tag is present.

- Door contacts are wired together in series so the door contact input on both the master and the slave. The result is that when any door in a master/slave configuration is open, the system behaves as if all doors are open, so alarm will recur if a tag is at a door in the vicinity of a door that is open.

Final Steps

⚠ **Do not supply power to the Exciter or any other network device until all connections are complete.**

Once all devices are installed, power up the Exciter and other devices to the Hugs system software, run Auto Configure to install the new devices, and then configure them for operation.

The coverage area of each Exciter must also be checked.

Refer to the Hugs Installation Manual (p/n 00588001) for detailed information on how to complete these steps.
