Laserline Alarm Manual:

The SAGES Manual of Robotic Surgery Sarah Samreen, Omar Yusef Kudsi, Dmitry Oleynikov, Ankit D. Patel, 2025-09-01

Robotic surgery is the fastest growing area in surgery worldwide. This growth has touched every single specialty but it is seen most prominently in general surgery. Since The SAGES Manual of Robotic Surgery was published in 2017, the increasing utilization of robotic surgery has led to advances in technique, technology, and even indications for the use of robotic procedures. Innovation has been at the forefront with development of newer robotic platforms. This revised and updated second edition provides a comprehensive review of indications, best practices, and advancements in technique over a wide variety of robotic procedures. The manual will be divided in sections. The first section includes chapters providing a general review of available robotic surgical systems, including future innovations and platforms. The second section focuses on specific procedures based on the various SAGES Masters Programs. The third section is comprised of chapters on miscellaneous but prominent and upcoming robotic areas such as thoracic breast transplant and cardiac procedures. All sections are accompanied by plentiful color figures and photos as well as high quality surgical videos. Like its predecessor, this manual provides a detailed review of robotic surgery and is geared towards surgeons at all levels of training and experience. It also addresses the needs of surgeons across various sub-specialties. In addition to providing insight into individual procedures, the general review of the system will be beneficial to those who are brand new to the technology.

DEFECT PROPORTION OF DETECTION INITIAL RATE DETECTION RATE INSPECTOR 3 COMPLEXITY OF TIMES PAN OF PERFORMING o _____ o _____ INSPECTION TASK VISUAL INSPECTION

Figure 1 Trends in relations between the complexity of inspection tasks, defect detection rates, absolute and relative, and inspection time. Irrespective of the necessities described above and with the exception of specific generic application systems (e.g. bare board PCB inspection, wafer inspection, solder joint inspection, linewidth measurement), vision systems are still not found frequently in today's electronics factories. Besides cost, some major reasons for this absence are:

- 1 The detection robustness or accuracy is still insufficient.
- 2 The total inspection time is often too high, although this can frequently be attributed to mechanical handling or sensing.
- 3 There are persistent gaps among process engineers, CAD engineers, manufacturing engineers, test specialists, and computer vision specialists, as problems dominate the day-to-day interactions and prevent the establishment of trust.
- 4 Computer vision specialists sometimes still believe that their contributions are universal, so that adaptation to each real problem becomes tedious or stumbles over the insufficient availability of multidisciplinary expertise.

Whether we like it or not, we must still use appropriate sensors, lighting, and combinations of algorithms for each class of applications. Likewise, we cannot design mechanical handling, illumination, and sensing in isolation from each other.
