

## EXERCISE 8 – CLASSIFICATION OF TISSUES

### OBJECTIVES

1. To name the four primary tissue types and their major subcategories, subtypes
2. To identify the four primary tissue types, giving the major subcategories of each (simple, stratified, transitional and/or pseudo)
3. To name the functions, locations, key features, of each tissue type (epithelial, and specific kind of each)
4. To differentiate between connective and loose connective. Also, examples of each

There are 4 TYPES of tissues: connective, muscular, nervous, epithelial. Epithelial, connective, and muscular are classified histologically into EPITHELIAL, CONNECTIVE, and MUSCULAR.

### EXERCISE 8.1: EPITHELIAL TISSUES

#### a. Simple

Simple Squamous Epithelium: sheets of cells

Simple Cuboidal Epithelium: kidney tubules

Simple Columnar Epithelium: intestinal mucosa, villi, uterine lining, gallbladder, inner lining of bronchus, endometrium

includes biochemical biophysical structural physiologic analyses of the paracellular channel and new technologies for recording and characterization Offers integrated coverage of all key aspects of the paracellular channel an understudied field that may hold key insights into some of the most mysterious aspects of physiology Targets different levels of expertise spanning from graduate students interns and clinical fellows to seasoned researchers that study functions regulation and dysfunctions of different tissue barriers Provides a cohesive and unifying picture that describes the critical functions of paracellular channels tight junctions in different tissues

**Cell and Matrix Mechanics** Roland Kaunas, Assaf Zemel, 2014-10-23 Explores a Range of Multiscale Biomechanics Mechanobiology Concepts Cell and Matrix Mechanics presents cutting edge research at the molecular cellular and tissue levels in the field of cell mechanics This book involves key experts in the field and covers crucial areas of cell and tissue mechanics with an emphasis on the roles of mechanical forces in cell matrix interactions Providing material in each chapter that builds on the previous chapters it effectively integrates length scales and contains for each length scale key experimental observations and corresponding quantitative theoretical models Summarizes the Three Hierarchical Levels of Cell Mechanics The book contains 14 chapters and is organized into three sections The first section focuses on the molecular level the second section details mechanics at the cellular level and the third section explores cellular mechanics at the tissue level The authors offer a thorough description of the roles of mechanical forces in cell and tissue biology and include specific examples They incorporate descriptions of associated theoretical models and provide the data and modeling framework needed for a multi scale analysis In addition they highlight the pioneering studies in cell matrix mechanics by Albert K Harris The topics covered include The passive and active mechanical properties of cytoskeletal polymers and associated motor proteins along with the behavior of polymer networks The mechanical properties of the cell membrane with an emphasis on membrane protein activation caused by membrane forces The hierarchical organization of collagen fibrils revealing that a delicate balance exists between specific and nonspecific interactions to result in a structure with semicrystalline order as well as loose associations The roles of matrix mechanical properties on cell adhesion and function along with different mechanical mechanisms of cell cell interactions The effects of mechanical loading on cell cytoskeletal remodeling summarizing various modeling approaches that explain possible mechanisms regulating the alignment of actin stress fibers in response to stretching The mechanical testing of cell populated collagen matrices along with theory relating the passive and active mechanical properties of the engineered tissues Cell migration behavior in 3 D matrices and in collective cell motility The role of mechanics in cartilage development The roles of both cellular and external forces on tissue morphogenesis The roles of mechanical forces on tumor growth and cancer metastasis Cell and Matrix Mechanics succinctly and systematically explains the roles of mechanical forces in cell matrix biology Practitioners and researchers in engineering and physics as well as graduate students in biomedical engineering and mechanical engineering related to mechanobiology can benefit from this work

Cell Motility Anne Ridley, Michelle

Peckham, Peter Clark, 2004-03-12 Recent advances in molecular and biophysical techniques particularly fluorescence and live cell imaging are revolutionizing the study of cell motility. New bioprobes not only reveal simple intracellular localization but also contain details of post translational modifications, conformational state and protein-protein interactions. Coupling these insights with complementary advances in genetic and biochemical methods is enabling scientists to understand the processes involved in cell motility from molecular motors to cell movements in vivo in a range of organisms and cell types. This book features landmark essays that provide an up to date and fascinating account of current research and concepts in cell motility. These cover the roles of molecular motors that drive movement and their interactions with the cytoskeleton as well as membrane dynamics that allow cells to change shape and to move. Cell motility plays a key role in development; there are chapters on the genetics of cell migration, the regulation of contact repulsion in growth cones and the progression from cell migration to cell-cell adhesion. Cell motility is directional; experts describe the molecules that regulate chemotaxis, allowing cells to migrate along pathways specified by chemical gradients. Finally, cell motility can be perturbed by mutation; metastasis occurs when cells lose their normal intercellular interactions and invade other tissue types. All these processes are regulated by signals from the environment, including other tissues in the body and the various molecules that transmit and transduce these signals; these are discussed. This book is a must read for cell biologists working in a variety of fields from development to wound healing at all levels: post doctoral fellows, post graduate students and lab technicians. It is also stimulating reading for molecular and developmental biologists, biophysicists and biochemists.
