

## Electromagnetic Energy and Light

How does light travel? Do different colors of light travel at the same speed?

### What?

Light is electromagnetic energy. The visible light spectrum is a tiny part of the electromagnetic spectrum. The wavelength of light is the distance between two peaks (or troughs) of a wave. The frequency of light is the number of waves that pass a point in a given amount of time. The speed of light is the distance that light travels in a given amount of time. The speed of light is constant in a vacuum, but it can change in different media. The speed of light is approximately  $3.0 \times 10^8$  m/s in a vacuum.

### Model 1 - White Light

1. How do you know the light is white? What evidence do you have to show that it is white?
2. What happens to white light when it passes through a prism?
3. Why are the colors split up like this? What's the difference between "Red" and "Blue"?
4. Do all colors of light travel at the same speed?
5. Do all colors of light have the same wavelength? If not, what color has the highest wavelength and the lowest wavelength?

6. Compare the light spectrum to Model 1.
  - a. What color corresponds to the highest wavelength?
  - b. What color corresponds to the lowest wavelength?
  - c. What is the difference between the wavelength of the highest and lowest wavelength of light?
