**Of Trees and Clouds** Franziska Weidle, 2020-05-11 Software based technologies deeply saturate our everyday lives Consequently they also influence the ways we see and mediate the world In fact the ease and flexibility software provides implies a shift in control Digital media mediates itself turning software into a co author Yet the potentials of such a co authorship are still largely constrained by conventions stemming from the need to run strips of celluloid through a projector This book demonstrates how software can retrain filmmakers' visions of the world from branching trees to the shifting contours of clouds It does so by ethnographically studying one particular technology the Korsakow System The result is a methodology for interrogating established software regimes a task increasingly in need of anthropological attention

The second half of the twentieth century saw an astonishing increase in computing power today computers are unbelievably faster than they used to be they have more memory they can communicate routinely with remote machines all over the world and they can fit on a desktop But despite this remarkable progress the voracity of modern applications and user expectations still pushes technology right to the limit As hardware engineers build ever more powerful machines so too must software become more sophisticated to keep up Medium to large scale programming projects need teams of people to pull everything together in an acceptable timescale The question of how programmers understand their own tasks and how they fit together with those of their colleagues to achieve the overall goal is a major concern Without that understanding it would be practically impossible to realise the commercial potential of our present day computing hardware That programming has been able to keep pace with the formidable advances in hardware is due to the similarly formidable advances in the principles for design construction and organisation of programs The efficacy of these methods and principles speaks for itself computer technology is all pervasive but even more telling is that they are beginning to feed back and influence hardware design as well The study of such methods is called programming methodology whose topics range over system and domain modelling concurrency object orientation program specification and validation That is the theme of this collection
