

5TH GRADE SCIENCE

Solar Systems Objects

The image displays a collection of educational resources for 5th-grade science, specifically focusing on solar system objects. In the foreground, a laptop screen shows a digital worksheet titled "SC.5.E.5.3 Solar System Objects" with various sections and images. Behind the laptop, a printed worksheet titled "Solar System Objects" is visible, featuring a diagram of the solar system with the sun at the center, planets in orbit, and a comet. The worksheet includes sections for "Comets", "The Flying Objects", "Dwarf Planets", and "Asteroids". The background is a light blue gradient with a faint illustration of the Earth and a bright sun.

Solar System Objects

Comets

A comet is a chunk of frozen gases, rock, ice, and dust. Comets have long orbits around the sun. When a comet gets close to the sun, it begins to break apart. The particles that break apart are called cometary dust. These particles reflect light from the sun.

The Flying Objects

Besides planets, there are many other bodies that orbit the sun. Let's find out about some of them.

Moons

Other moons are very different from Earth's moon. Europa, one of Jupiter's moons, may have a liquid ocean under a layer of ice. Another of Jupiter's moons, Io [YO-uh], has the most active volcanoes of any body in the solar system.

Dwarf Planets

Pluto was once called a planet. But in 2006, it was reclassified as a dwarf planet. Dwarf planets are nearly round bodies whose orbits cross the orbits of other bodies. Most are found in a region of the solar system beyond Neptune's orbit called the Kuiper belt. These objects are far away and hard to study. Quaoar, whose name was discovered in 2002.

Asteroids

Asteroids are rock and iron objects that orbit the sun. Millions of them are found in the wide region between Mars and Jupiter. Asteroids are made up of rock and metal.

Meteoroids

Each day, tons of meteoroids are passing by Earth. Most meteoroids are pieces of rock that are too small to be seen. Meteoroids travel through space. Most meteoroids burn up in Earth's atmosphere, causing a streak of light called a meteor. Meteoroids that reach Earth's surface are called meteorites.
