Daniel M. Griffith, Christopher J. Still, Colin P. Osborne, 2019-08-02 Early biogeographers such as Alexander von Humboldt
recognized the broad scale coupling of vegetation and climate This observation shaped the modern biome concept which
organizes ecosystems by assumed relationships to environmental controls This approach has been criticized for missing key
impacts on the distribution and functioning of biomes like historical contingency biogeographic history disturbance ecology
and evolution Are biomes still a convenient framework for organizing our understanding of biodiversity What factors
determine the functional differences among and within biomes and at what spatial temporal and phylogenetic scales are
those drivers most important How can we better represent the functional characteristics and dynamics of ecosystems This
Research Topic highlights the latest discussions and research on biomes drawing from a wide range of approaches spanning
from macroecology and phylogeography to remote sensing and modelling ecosystem responses to global change *Biomes
