Corruption, Infrastructure Management and Public-Private Partnership Mohammad Heydari, Kin Keung Lai, Zhou Xiaohu, 2021-10-27 Public-Private Partnerships (PPP) or 3Ps allow the public sector to seek alternative funding and expertise from the private sector during procurement processes. Such partnerships if executed with due diligence often benefit the public immensely. Unfortunately, Public-Private Partnerships can be vulnerable to corruption. This book looks at what measures we can put in place to check corruption during procurement and what good governance strategies the public sector can adopt to improve the performance of 3Ps. The book applies mathematical models to analyze 3Ps. It uses game theory to study the interaction and dynamics between the stakeholders and suggests strategies to reduce corruption risks in various 3Ps stages. The authors explain through game theory-based simulation how governments can adopt an evaluating process at the start of each procurement to weed out undesirable private partners and why the government should take a more proactive approach. Using a methodological framework rooted in mathematical models to illustrate how we can combat institutional corruption, this book is a helpful reference for anyone interested in public policymaking and public infrastructure management.

Water Worlds: Human Geographies of the Ocean Kimberley Peters, 2016-02-11 Our world is a water world. Seventy percent of our planet consists of ocean. However, geography has traditionally overlooked this vital component of the Earth's composition. The word geography directly translates as earth writing and in line with this definition, the discipline has preoccupied itself with the study of terrestrial spaces of society and nature. This book challenges human geography's preoccupation with the terrestrial, investigating the terra incognita of the seas and oceans. Linking to new theoretical debates shaping the geographic discipline.

such as affect assemblage emotion hybridity and the more than human this volume unlocks new knowledge concerning the human geographies of ocean space The book casts adrift stable bounded and fixed conceptions of space and advances geographical understanding based on the world as becoming changing mobile and processional This ontology supports the notion that the oceans are not simply fluid in a literal way but also in a conceptual sense suggesting that the seas have their own fluid natures their own capacities and agencies which are co fabricated with social and cultural life This book features twelve chapters authored by key academics contributing to this growing field of research The book is divided into three sections including an Introduction by the editors and a foreword by Prof Philip E Steinberg the leading scholar in the field of maritime geographies The first section of the book considers the ways in which different watery spaces from the Atlantic Ocean to the Mediterranean Sea have been conceptualized theorized and known through metaphors voyages of discovery and scientific endeavour The second section examines how oceans are experienced through various activities including driving on water kayaking in water and diving under water The final section explores the relations between human life and the nature of the sea as a material mobile and more than human spa
