5.1: HISTORY OF THE PERIODIC TABLE

• Introductory

- **periodic law** = the law that states that the repeating chemical and physical properties of elements change periodically with the atomic numbers of the elements
- **periodic table** = an arrangement of the elements in order of their atomic numbers such that elements with similar properties fall in the same column.
- **classification** = a method of the elements based on the atomic number, physical properties, and/or other factors. All elements are in the Periodic Table.
- **classification** = one of the ways of classifying elements that elements that have the same atomic number (1) through lanthanides (element number 103) are the periodic table.

• Chapter Highlights

- The periodic law states that the physical and chemical properties of the elements, and periodic functions of their atomic numbers.
- The periodic table is an arrangement of the elements in order of their atomic numbers so that elements with similar properties fall in the same column/group/family.
- The columns in the periodic table are referred to as groups.

5.2: ELECTRON CONFIGURATIONS AND THE PERIODIC TABLE

• Introductory

- **atomic shell** = one of the elements of Group 1 of the periodic table (lithium, sodium, potassium, rubidium, cesium, and francium)
- **transition elements** = one of the elements of Group 2 of the periodic table (beryllium, magnesium, calcium, strontium, barium, and radium)
- **representative elements** = one of the elements that are not the inner shell electrons using the outer shell to form.
- **transition elements** = an element in the d-block or f-block of the periodic table.
