

Bird Beak Lab

Background Information

The adaptation is a trait that helps an organism survive and reproduce. Beak shape and size is an example of an adaptation. As this lab goes, you will use three different adaptations and measure the bird's volume of capturing food. You will use materials such as clay, paper, straws, etc., and you will represent a type of bird food. You will then use materials to pick up food as represented by horizontally (forward), parallel (up), vertical (down) and some birds. The size represents the bird's stomach.
