

Preparation of Letters for the IEEE Sensors Journal (February 2006)

First A. Author, Second B. Author, Jr., *Fellow IEEE*, and Third C. Author, *Member IEEE*

Abstract—These instructions, modeled after the standard format for all IEEE journal papers, give you guidelines for preparing Letters for IEEE SENSORS JOURNAL. Use this document as a template to prepare your manuscript if you are using Microsoft Word 6.0. Otherwise, use this document as an instruction set. Define all symbols used in the abstract. Do not cite references in the abstract. Do not delete the blank line immediately above the abstract; it sets the footnote at the bottom of this column.

Index Terms—About four key words or phrases in alphabetical order, separated by commas. For a list of suggested keywords, send a blank e-mail to keywords@ieee.org or visit the IEEE web site http://www.ieee.org/organizations/pubs/ami_prosd/keywrd98.txt at

I. INTRODUCTION

THIS document is a template for Microsoft Word versions 6.0 or later. If you would prefer to use LATEX, download IEEE's LATEX style and sample files from <http://www.ieee.org/organizations/pubs/transactions/stylesheets.htm>.

When you open this model DOC file, select "Page Layout" from the "View" menu in the menu bar (View | Page Layout), which allows you to see the layout of the document. Then type over the header and section of the document, or cut and paste from another document. The pull-down style menu is at the left of the Formatting Toolbar at the top of your Word window (for example, the style at this point in the document is "Text"). Highlight a section that you want to designate with a certain style, then select the appropriate name on the style menu. The

Manuscript received October 9, 2001. (Write the date on which you submitted your paper for review.) This work was supported in part by the U.S. Department of Commerce under Grant H5123456 (sponsor and financial support acknowledgment goes here). Paper titles should be written in uppercase and lowercase letters, not all uppercase. Avoid writing long formulas with subscripts in the title; short formulas that identify the elements are fine (e.g., "Mn-Fe-B"). Do not write "Olevited" in the title. Full names of authors are preferred in the author field, but are not required. Put a space between authors' initials.

F. A. Author is with the National Institute of Standards and Technology, Boulder, CO 80505 USA (corresponding author to provide phone: 303-555-5555; fax: 303-555-5555; e-mail: author@boulder.nist.gov).

S. B. Author, Jr., was with Rice University, Houston, TX 77005 USA. He is now with the Department of Physics, Colorado State University, Fort Collins, CO 80523 USA (e-mail: author@lamar.colostate.edu).

style will adjust your fonts and line spacing. **Do not change the font sizes or line spacing to squeeze more text into a limited number of pages.** Use italics for emphasis; do not underline.

To insert images in Word, position the cursor at the insertion point and either use Insert | Picture | From File or copy the image to the Windows clipboard and then Edit | Paste Special | Picture (with "Float over text" unchecked).

II. PROCEDURE FOR MANUSCRIPT SUBMISSION

A. Manuscript Preparation

Use the guidelines described below to prepare your Letters manuscript using the two-column format as illustrated in this DOC file. **Letters are limited to two pages and are accepted or rejected as submitted, so prepare your manuscripts carefully.** No exceptions to the two-page limit will be made.

B. Manuscript Submission

All manuscripts are submitted using Manuscript Central. The website is <http://sensors-ieee.manuscriptcentral.com/>.

C. Tables and Figures

In your submitted Letters manuscripts, make the tables and figures appear in the format as shown in Fig. 1 and Table 1

Fig. 1. Magnetization as a function of applied field. Note that "Fig." is abbreviated. There is a period after the figure number, followed by two spaces. It is good practice to explain the significance of the figure in the caption.

Telecommunication Networks Eugenio Iannone, 2017-12-19 Many argue that telecommunications network infrastructure is the most impressive and important technology ever developed. Analyzing the telecom market's constantly evolving trends, research directions, infrastructure, and vital needs, Telecommunication Networks responds with revolutionized engineering strategies to optimize network construction. Omnipresent in society, telecom networks integrate a wide range of technologies. These include quantum field theory for the study of optical amplifiers, software architectures for network control, abstract algebra required to design error correction codes, and network thermal and mechanical modeling for equipment platform design. Illustrating how and why network developers make technical decisions, this book takes a practical engineering approach to systematically assess the network as a whole, from transmission to switching. Emphasizing a uniform bibliography and description of standards, it explores existing technical developments and the potential for projected alternative architectural paths based on current market indicators. The author characterizes new device and equipment advances not just as quality improvements but as specific responses to particular technical market necessities. Analyzing design problems to identify potential links and commonalities between different parts of the system, the book addresses interdependence of these elements and their individual influence on network evolution. It also considers power consumption and real estate, which sometimes outweigh engineering performance data in determining a product's success. To clarify the potential and limitations of each presented technology and system analysis, the book includes quantitative data inspired by real products and prototypes. Whenever possible, it applies mathematical modeling to present measured data, enabling the reader to apply demonstrated concepts in real-world situations. Covering everything from high-level architectural elements to more basic component physics, its focus is to solve a problem from different perspectives and bridge descriptions of well-consolidated solutions with newer research trends.

Multidimensional Modulations in Optical Communication Systems Silvello Betti, Pierluigi Perrone, Giuseppe Giulio Rutigliano, 2021-08-19 This book analyzes novel possibilities offered to the telecommunication engineer in designing tomorrow's optical networks. Currently optical and optoelectronic technologies make possible the realization of high performance optical fiber communication systems and networks with the adoption of WDM configurations and both linear and nonlinear optical amplifications. The last step for increasing network throughput is represented by the implementation of multidimensional modulation formats in coherent optical communication systems which enable increasing the bit rate channel toward 400 Gbit/s channel and beyond. Following this approach the main emphasis is placed on innovative optical modulations. *Multidimensional Modulations in Optical Communication Systems* is an essential guide to the world of innovative optical communications from the point of view of growing capacity and security. It guides researchers and industries with the aim to exploring future applications for optical communications.
