OPPOSITE

It is important to gain consent before assisting the patient (see Section 1.2). The initial assessment should be completed by requesting as much of the patient as is necessary in the circumstances to facilitate full access to the examination. To obtain the patient's dignity, it is often better to undertake a supervised examination through the clothing while awaiting a fuller examination in the privacy of the ambulance. Clinical observations, such as colouring in, should, not demonstrate deficiencies due to features or evidence of bleeding.

It also important to recognise the effect that the environment can have on the patient, particularly if it is cold, raining, noisy, hot etc. The provider should seek to minimise the effect of the environment on the patient, for example, by keeping the patient protected from the elements.

Remember to repeat the primary survey regularly.

VENTILATION SUPPORT (BAG-VALVE-MASK)

(Note: for providers, this is a two-man technique)

Effective cooperation of the rescuer by inflation and removal of carbon dioxide by automatic or fully controlled through a good rate, rhythm and depth of breathing. By using a reservoir an airway seal pressure between 12 and 20 litres per minute with sufficient volume to make the chest rise.

In some patients lying on the ground, the rescuer does not often move it to the ambulance. However, that are doing the work. The adequacy of this form of breathing needs to be further supported by feeling for airflow from the mouth, as there could be insufficient volume thereby resulting in ineffective ventilation.

When a patient fails to breathe, or is not breathing
