

UNIT 2 PART 1 STUDY GUIDE

READING COMPREHENSION

1. What's matter?
Matter makes up everything except energy (heat and light)
2. Give three examples of matter.
Solid (steel), liquid (water), and gas (air)
3. Discuss the difference between a physical property and a chemical property.
Physical properties describe substances using five senses without changing the substance.
Chemical properties describe substances when they change.
4. Give examples of physical properties.
Color, texture, temperature, shape, size, mass, conductivity, density, magnetism
5. Give examples of chemical properties.
Flammability, ability to react with other substances, reactivity, toxicity
6. Discuss the difference between solubility and a compound's ability to react with other substances.
Solubility describes how well one substance dissolves in another, and its chemical properties depend on what the substance is made of.
7. What are elements? Give an example of an element.
It is the smallest amount of matter that cannot be broken down by physical means.
8. How is an element different from a compound? Give an example of a compound.
An element cannot be broken down, a compound can be broken down into elements.
9. What's a mixture?
A mixture is a combination of substances where the substances do not give up their properties. (Homogeneous mixtures)
10. How is a homogeneous mixture different from a compound? Give an example of a homogeneous mixture.
A mixture of steel is different from a compound.
11. How is a heterogeneous mixture different from a compound? Give an example of a heterogeneous mixture.
A mixture of oil and water is different from a compound.
12. How can you tell the difference between a homogeneous mixture and a heterogeneous mixture?
You can see the individual substances in the heterogeneous mixture, and in homogeneous mixtures, the substances are mixed together completely.

What are the states of matter?

1. What are the three states of matter?

Riding on a Ray of Light Krishnagopal Dharani, 2020-04-07 A Conceptual Breakthrough in Our Understanding of Fundamental Nature of Matter and Energy A lot of questions have bothered science for a long time What is a photon Why does light behave both like a particle and a wave How does light transform into matter What is gravity What is Big Bang and what came before it The list is endless Riding on a Ray of Light describes a working model called the Negentropic Model which describes the fundamental nature of matter and energy The negentropic model formulated as a single theoretical principle based on the current scientific concepts describes the precise structure of photon along with an explicit mechanism of generation of a light It also describes the precise nature of matter and its formation in nature along with the intriguing nature of gravity Alongside this model explains the underlying meaning of some of the weirdest quantum phenomena such as wave particle duality In addition by proposing the concept of dark protons negentropic model allows us to delineate the precise nature of dark matter and dark energy and this knowledge lets us peep into the depths of black holes to understand their true nature Basing on these findings the concept of Big Bang is revised and a brand new concept of Differential Big Bang proposed Riding on a Ray of Light presents the most comprehensive model in fundamental physics proposed so far for answering many of the hitherto unanswered questions in particle physics and cosmology which really helps us to work towards a Theory of Everything
