Deep Learning for Marine Science, volume II Haiyong Zheng, Jie Nie, Xiangrong Zhang, Huiyu Zhou, An-An Liu, 2024-11-07 This Research Topic is the second volume of this collection You can find the original collection via <https://www.frontiersin.org/research-topics/45485/deep-learning-for-marine-science> Deep learning DL is a critical research branch in the fields of artificial intelligence and machine learning encompassing various technologies such as convolutional neural networks CNNs recurrent neural networks RNNs Transformer networks and Diffusion models as well as self supervised learning SSL and reinforcement learning RL These technologies have been successfully applied to scientific research and numerous aspects of daily life With the continuous advancements in oceanographic observation equipment and technology there has been an explosive growth of ocean data propelling marine science into the era of big data As effective tools for processing and analyzing large scale ocean data DL techniques have great potential and broad application prospects in

marine science Applying DL to intelligent analysis and exploration of research data in marine science can provide crucial support for various domains including meteorology and climate environment and ecology biology energy as well as physical and chemical interactions Despite the significant progress in DL its application to the aforementioned marine science domains is still in its early stages necessitating the full utilization and continuous exploration of representative applications and best practices

Deep Learning for Marine Science Haiyong Zheng, Mark C. Benfield, Hongsheng Bi, Xuemin Cheng, 2024-05-15 Deep learning DL mainly composed of deep and complex neural networks such as recurrent network and convolutional network is an emerging research branch in the field of artificial intelligence and machine learning DL revolution has a far reaching impact on all scientific disciplines and every corner of our lives With continuing technological advances marine science is entering into the big data era with the exponential growth of information DL is an effective means of harnessing the power of big data Combined with unprecedented data from cameras acoustic recorders satellite remote sensing and large model outputs DL enables scientists to solve complex problems in biology ecosystems climate energy as well as physical and chemical interactions Although DL has made great strides it is still only beginning to emerge in many fields of marine science especially towards representative applications and best practices for the automatic analysis of marine organisms and marine environments DL in nowadays marine science mainly leverages cutting edge techniques of deep neural networks and massive data which collected by in situ optical or acoustic imaging sensors for underwater applications such as plankton classification and coral reef detection This research topic aims to expand the applications of marine science to cover all aspects of detection classification segmentation localization and density estimation of marine objects organisms and phenomena
